Monitoring Report 2018

Shopping & Local Centres SPD: Monitoring Report 2018

Context

The Shopping and Local Centres SPD was adopted in March 2012 and was produced to help address a range of issues affecting the vibrancy and vitality of Birmingham's largest 73 shopping centres outside the city centre. Its purpose is to encourage investment into local centres and guide future development to help maintain a viable balance between retail and non-retail uses.

The SPD identifies a hierarchy of centres - Town, District and Neighbourhood - in line with both national policy guidance and Birmingham's Development Plan. For each centre a definitive boundary is established, within which a Primary Shopping Area (PSA) is identified.

The main policies established seek to:

- 1) maintain a minimum of 55% of units in the Primary Shopping Area of Town and District Centres and 50% of units in the Primary Shopping Area of Neighbourhood Centres in A1 retail use.
- 2) avoid an overconcentration of A5 hot food take-away uses by restricting their number to no more than 10% of the total units in a centre or individual parade, and
- 3) ensure no individual proposal adversely affects local amenity or contribute to non-retail clustering.

Upon adoption of the Birmingham Development Plan (BDP), Policies 1 and 4 of the SPD were incorporated into BDP Policy TP24. This gives them full Development Plan status. The remainder of the SPD will be reviewed to reflect this, and clarify its role in identifying up-to-date Centre and Primary Shopping Area boundaries.

Baseline data

During the preparation of the SPD, detailed land use surveys were undertaken for each local centre. The survey data was mapped and summary land use information published on the Council's website along with the adopted SPD, <http://www.birmingham.gov.uk/spdlocalcentres>. The survey data had a baseline date of April 2011.

Since adoption, the Council has monitored all planning permissions and refusals within centres and this has enabled us to assess how the policies are working and how the balance of uses may be changing.

Scope of monitoring

Monitoring reports have been produced annually since 2013. This monitoring information is dated to 31st March 2018.

Monitoring is based on desktop updates of planning permissions in view of the resource implications of re-surveying each centre every year. Periodic full resurveys are required to keep the surveys as accurate as possible and in 2016 full resurveys were undertaken to ensure that changes of use under Permitted Development rights were captured.

The changes to the Use Class Order in 2015 resulted in various uses moving to the Sui Generis Use Class. The methodology used to calculate the percentages in Tables 2 and 3 has been updated accordingly, and includes Sui Generis and selected Class B1/D1/D2 Uses in retail premises (as defined in the Shopping & Local Centres SPD Appendix) to ensure accuracy.

Key Findings 2012 – 2018

Since the adoption of the Shopping & Local Centres SPD and the application of its policies, the following decisions and trends have been monitored:

Table 1: Planning Permissions and refusals in Local Centres 2012-2018

	2012-2017	2017-2018	Total
Total number of relevant planning decisions	660	141	801
A1			
Permissions leading to loss of A1 retail use	188	52	240
Permissions granted for new A1 retail use	96 units	42 units	328 units
Permissions granted for Change of use (CoU) to A1 retail use	43 units	11 units	
Permissions granted for A1 retail as part of mixed use permissions	24 schemes, 111 units	6 schemes, 25 units	
	250 units	78 units	
A2			
New construction or CoU to A2 (financial & professional services) permissions	29 units	1 unit	30 units
New A2 or CoU to A2 as part of mixed permissions	10 units	1 unit	11 units
A3			
New construction or CoU to A3 (restaurant & café) use	85 units	33 units	113 units
New A3 as part of mixed permissions	26 units	3 units	29 units
A4			
CoU to A4 (drinking establishment) use	7 units	1 unit	8 units
New A4 or CoU to A4 as part of mixed permissions	5 units	2 units	7 units
A5			
New construction or CoU to A5 (hot food takeaway) use	36 units	6 units	42 units
New A5 or CoU to A5 as part of mixed permissions	15 units	1 unit	16 units
A3/A5			
New or CoU to A3/A5 permissions (not counted above)	26 units	8 units	34 units
D1			
New construction or CoU to D1 (non-residential institutions) use	45 units	7 units	52 units
New D1 or CoU to D1 as part of mixed permissions	4 units	0 units	4 units
D2			
New D2 or CoU to D2 (assembly & leisure) use	19 units	5 units	24 units
C3			
Conversion from B1 (business) to C3 (residential) use	627 units including 11 schemes (64 units), plus	4 schemes, 309 units	1362 units

	3 large schemes (426 units)		
Conversion from D1 (non-residential institutions) to C3 (residential) use	6 units	0 units	6 units
Sui Generis			
New construction or CoU to Sui Generis use	10 units (not monitored prior to 2016)	9 units	19 units
Refusals and appeals in centres			
Number of A3 refusals	6*	7	
Number of A3 applications withdrawn	25*	4	
Number of A5 refusals	36	5	
Number of A5 applications withdrawn	11*	1	
Number of A3/A5 refusals	10	2	
Number of A3/A5 (or other mixed uses including A5) applications withdrawn	11*		
Number of A5 appeals	18	3	21
Number of A5 appeals dismissed	13	1	14
Number of A5 appeals allowed	5	1	6
Number of A5 appeals outstanding		3	3
Outside centres			
New construction or CoU to A5 (hot food takeaway) use outside Centres	76 units	6 units	82 units
Mixed use proposals including A5 use outside Centres	34 units*	0 units	34 units
Number of A5 refusals outside Centres	56 units	4 units	60 units
Mixed use proposals including A5 use refused outside Centres	11 units*	0 units	11 units

*2014-16 only – not previously monitored.

Monitoring the Shopping & Local Centres SPD – A1 Uses

Most centres remain within the SPD Policy 1/BDP Policy TP24 threshold of 50/55% for A1 Uses within Primary Shopping Areas. The exceptions are:

- Queslett and Scott Arms, where the part of those centres within Birmingham is below the 50% threshold.
- Ivy Bush, at under 40%
- Selly Oak, at just over 45%, is subject to two significant redevelopment proposals which increase the amount of A1 floorspace, but reduce the number of A1 Units. Cumulatively, with changes outside planning control, the policy thresholds have been breached, but in this instance the regeneration benefits are considered to be paramount.
- Balsall Heath and Moseley, at 44/48% A1 Uses, are stable centres but both are below their 50% threshold.

Other centres at or close to their policy thresholds are: Fox & Goose, Frankley, and Highfield Road. Planning applications in these centres will need to be considered carefully to avoid further breaches of the policy.

There are several centres where major redevelopments are proposed or have been completed:

With permission: Not yet started	Under construction	Recently completed
Erdington	Selly Oak	Sheldon
Stirchley	Longbridge (Largely completed)	Edgbaston (Shopping Centre/ Auchinleck House)
		Swan, Yardley
		Mere Green

For earlier trends, see previous Monitoring Reports.

▲	Trend – Use Class increasing in percentage
▼	Trend – Use Class decreasing in percentage

=	Percentage unchanged
	Policy compliant
	Policy compliant but close to, or at threshold
	Centre not policy compliant
*	Queslett & Scott Arms local centres are mainly (50% and 75% respectively) outside the city boundary. The 2018 monitoring applies only to the parts of those centres within Birmingham.
**	Major redevelopment at The Swan, Yardley in progress in 2011.

Monitoring the Shopping & Local Centres SPD – A5 Uses

With regard to SPD Policy 4/BDP Policy TP24 (Hot Food takeaways), at the time of adoption of the SPD almost half the local centres (33 out of 73) exceeded the policy's 10% threshold. It was chosen as an average, based on the baseline surveys, so it is expected that approximately half of the centres will exceed it.

In 2018, 28 centres exceeded the threshold, unchanged from 2017.

Furthermore, Alum Rock Road, Kingstanding Circle, Rookery Road, Walmley and Wylde Green currently contain in excess of 9% A5 uses. Although they are just below the 10% threshold, any future proposals for Hot Food takeaways in these centres will require careful consideration if they are to remain policy compliant.

For earlier trends, see previous Monitoring Reports.

▲	Trend – Use Class increasing in percentage
▼	Trend – Use Class decreasing in percentage
=	Percentage unchanged
Green	Policy compliant
Yellow	Policy compliant but close to, or at threshold
Red	Centre not policy compliant
*	Queslett & Scott Arms local centres are mainly (50% and 75% respectively) outside the city boundary. The 2018 monitoring applies only to the parts of those centres within Birmingham.
**	Major redevelopment at The Swan, Yardley in progress in 2011.

Conclusions

- Of the city's Local Centres, Balsall Heath, Ivy Bush, Moseley and Selly Oak currently fall below their minimum thresholds for Class A1 Uses in Policy 1.
- Queslett and Scott Arms are centres which extend beyond the city boundary. Baseline monitoring in 2011 calculated the Policy 1 percentage on the whole of those centres. From 2013 this was revised to only the parts within Birmingham, causing a significant decrease in the percentage figures in those centres. For 2017, whole centre figures are included in the tables above for comparative purposes.
- 28 out of 73 centres are over 10% A5s when Sui Generis uses are included in the calculations.
- The change of certain uses from A1 to Sui Generis in 2015 had a slight impact on the percentage of A1 uses in some centres.
- 45 are under 10%, of which 6 are in excess of 9% A5s.
- Prior to adoption of the SPD, Class A5 Uses were being approved in the absence of strong policy. Extant consents accounted for some increases in A5 Uses above the 10% threshold in Policy 4 before 2014, but this trend has generally now ceased. The exceptions are occasional appeal decisions where a long term void unit is better brought into beneficial use than remain empty.
- There appears to be a slow trend from A1 uses to A3 and A5, some under permitted development, but most of these changes require planning permission or Prior Approval. However, there is an almost equivalent rate of changes into A1 from other uses.
- Permitted Development changes are showing organic change in centres, which accounts for small changes in percentage rates.
