2017 Drug strategy

- Partnership approach – jointly owned by local authorities, health, employment, housing and criminal justice partners
- 4 strands: reducing demand, restricting supply, building recovery and global action
- Reduce illicit and harmful drug use
- Personalised support to increase rates recovering from dependence
- Joined up approach with alcohol treatment
Trends in prevalence: 11-15 year olds, England

Drugs Taken in the Last Year by Year

- Psychedelics
- Stimulants
- Cannabis
Drug use amongst 11-15 year olds, England

- Steady decline since 2001
- Cannabis most commonly taken drug
- 7.9% used cannabis in last year, 4.4% volatile substances (glue, gas, aerosols, solvents), 4% nitrous oxide, 1.6% NPS, 3.2% any class A drug
- 37% of 15 year olds have ever taken drugs, 18% have taken in the last month
- Percentages are similar for boys and girls
- Prevalence increases with age: 7% of 11 year olds had taken drugs in the last year, compared with 30% of 15 year olds
- Higher drug use amongst black pupils (34% had ever taken vs 23% for whites)
- 55% of 15 year olds have been offered drugs
- Pupils who first tried drugs at a younger age were more likely to have taken volatile substances, whereas those who first tried at an older age were more likely to have tried cannabis
- 49% who had taken on more then one occasion had got from a friend, compared to 26% from a dealer

Source: Smoking, drinking and drug use among young people, 2016
Trends in prevalence: 16-24 year olds, E&W

Figure 1.1: Trends in drug use in the last year among adults, 16 to 59 and 16 to 24 year olds, 1996 to 2017/18 CSEW

Source: Crime Survey for England and Wales, 2017/18
Drug use amongst 16-24 year olds, E&W

- Around 1 in 5 (19.8%) adults aged 16 to 24 had taken a drug in the last year, compared to 1 in 11 (9%) of people aged 16 to 59
- Around 1 in 11 (9.5%) young adults aged 16 to 24 had taken a drug in the last month, compared to around 1 in 23 (4.3%) of those aged 16-59
- Among young adults aged 16 to 24, 8.4% had taken a Class A drug in the last year, compared with 3.5% of people aged 16-59
- There has been an upward trend since 2011/12 in class A drug use amongst 16-24 year olds, driven mainly by an increase in powder cocaine and ecstasy use
- Note that the source: CSEW is a household survey and excludes use by those who are homeless, in temporary accommodation or in prison

Source: Crime Survey for England and Wales, 2017/18
New psychoactive substances, E&W

• Use of NPS has fallen since they were made illegal in May 2016
• Around half of all NPS users were aged 16 to 24
• People who had visited a pub or nightclub, consumed alcohol, or used another drug, were more likely to have used NPS in the last year than those who had not
• Herbal smoking mixtures were still the most commonly used NPS in the last year, although there was an increase in the use of liquids
• NPS were more likely than other illicit drugs to be obtained from shops and the internet

Source: Crime Survey for England and Wales, 2017/18
Among 16-59 year olds...

- 7.2% used cannabis
- 2.6% used powder cocaine
- 1.7% used ecstasy
- 0.4% took new psychoactive substances (NPS)

...in the last year

Among 16-24s...

- 1 in 5 used an illicit drug
- 1.2% took new psychoactive substances

...in the last year

- 2.1% of 16-59s are frequent* drug users
- 4.1% of 16-24s are frequent* drug users

The majority of ecstasy and powder cocaine users only take the drug once or twice a year

34% of cannabis users aged 16-59 are frequent* users

The type of NPS most recently used was most likely to be a herbal smoking mixture (33%)

The source of NPS or nitrous oxide was most likely to be from a friend, neighbour or colleague, which was most likely to have originated from the internet

NPS use among 16 to 59 year olds has remained at 0.4%

* Frequent drug use is defined as taking an illicit drug more than once a month in the last year.

Infographics sponsored by Intelligent Fingerprinting
Smoking: ages 11-15, England

- Smoking rates amongst 11-15 year olds have declined over the last 15 years
- In 2016, 36% of 15 year olds had ever smoked
- Smoking prevalence increases with age: 1% of 11 year olds vs 15% of 15 year olds are current smokers
- Rates are higher amongst girls: 12% of boys and 18% of girls aged 15 are current smokers
- Prevalence is higher amongst white and mixed ethnicities for both boys and girls and Asian boys
- Factors associated with smoking regularly include: drinking alcohol in the last week, taking drugs in the last year or month, having 1 or 2 smokers at home, having friends who smoke, being excluded from school

Source: Smoking, drinking and drug use among young people, 2016
An alcohol-free childhood is the healthiest and best option. However, if children drink alcohol underage, it should not be until at least the age of 15 years.

Low risk guidelines are the SAME for men & women. BOTH are advised not to regularly drink more than 14 units a week.
Alcohol use: ages 11 to 15, England

- There was a decline in drinking alcohol between 2003 and 2014
- In 2016, 44% of 11-15 year olds had ever tried alcohol; 10% had drunk alcohol in the last week
- Prevalence of drinking alcohol is higher amongst white and mixed ethnicities than black and Asian pupils
- 7% of boys and 11% of girls had been drunk in the last 4 week
- Factors associated with drinking in the last week include: drinkers at home, older pupils, taking drugs, smoking, truancy, white or mixed ethnicity and families that don’t discourage drinking

Source: Smoking, drinking and drug use among young people, 2016
Alcohol consumption: ages 16-24, GB

- Prevalence of drinking alcohol has declined for all age groups over the last 10 years
- People aged 16-24 are less likely to be drinkers than older ages
- In 2017, 48% of 16-24 years had an alcoholic drink in the previous week compare to 57% for all aged 16+
- However, young people aged 16-24 who do drink are more likely to drink more than recommended levels
- Of those aged 16-24 who drink, 43% exceeded 8 units (men)/6 units (women) on their heaviest drinking day in the last week
- 30% exceeded 12 units (men)/9 units (women)
- 16-24 year olds of white ethnicity are around twice as likely to exceed recommended levels as non-whites

Sources: Crime Survey for England and Wales, 2017/18, Adult drinking habits in Great Britain, 2017: ONS
Risk factors for substance misuse

• Risk factors include experiencing abuse and neglect (including emotional abuse), truanting from school, offending, early sexual activity, antisocial behaviour and being exposed to parental substance misuse
• More risk factors = higher likelihood of substance misuse
• More severe drug misuse associated with earlier start age
• Regularly excessively consuming another substance eg alcohol or already using drugs on an occasional basis
• Smoking and alcohol consumption twice as likely for lesbian and gay 18-19 year olds compared to heterosexual
• Girls with low life satisfaction are more likely to drink, smoke and use cannabis
• Good mental and physical health and wellbeing are protective factors, along with good social relationships and support inside and outside the home
Groups at risk (PHE)

- Looked after children
- Children in need/child protection plan
- Domestic abuse
- Mental ill-health
- Child sexual exploitation (CSE)
- Self-harm
- Not in education, employment or training (NEET)
- Housing problems
- Parental substance abuse
- Antisocial behaviour/criminal activity

Parental substance misuse

Dependent parental alcohol and drug use has an adverse impact on children, particularly regarding their physical health, psychological wellbeing and personal alcohol and drug use.

There is increasing evidence that adverse childhood events (ACEs) such as living in a household with problem alcohol use can contribute to long term harms. If a child experiences four or more risk factors during childhood they have a substantially higher risk of developing health-harming behaviours, such as smoking, heavy drinking and cannabis use.

A recent report by the Children’s Commissioner produced prevalence estimates for the percentage of children affected by parents with drug or alcohol misuse, mental health problems and experiencing domestic violence and abuse. Applying these results locally we estimate:

- 30,000 children and young people aged under 18 in Birmingham are living with an adult who has reported substance misuse
- Of these, over 11,000 are living with an adult dependent on drugs or alcohol
- Of these, 2,500 are living with an adult who also has severe mental health problems and has experienced DV

What can we do about it?
Cost-effectiveness of interventions

- School-based prevention interventions, including those delivered as part of the curriculum, derive cost-benefits for society. For example, interventions to tackle emotional learning save money in the first year by reducing costs for social services, the NHS and criminal justice system, and have recouped £50 for every £1 spent.

- Specialist interventions for young people’s substance misuse are effective and provide value for money. A Department for Education cost-benefit analysis found that every £1 invested saved £1.93 within two years and up to £8.38 in the long term.

PHE guidance on interventions aimed at prevention

Universal
Whole population eg school

Selective
Specific sub-populations known to be at greater risk

Indicated
Those already using substances but not dependent

### Types of intervention linked with successful outcomes

<table>
<thead>
<tr>
<th>Types of intervention likely to be successful</th>
<th>Types of intervention likely to be unsuccessful</th>
</tr>
</thead>
<tbody>
<tr>

School-based guidance

- Drug and alcohol education
- Dealing with drug-related incidents
- Supporting personal, social and health needs of pupils relating to drugs
- Developing a school drugs policy

DfE and ACPO drug advice for schools (2012)
https://www.gov.uk/government/publications/drugs-advice-for-schools
## NICE guidance: Alcohol

### School-based interventions (PH7, 2007)
Aim to prevent and reduce drinking in CYP, additionally cover PRU, secure units, FE colleges

<table>
<thead>
<tr>
<th>3 Recommendations:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Include science and PHSE education on harmful effects of alcohol, attitudes and perceptions of drinking, social skills, whole school approach (in line with DCSF guidance)</td>
</tr>
<tr>
<td>o Healthy Schools Programme</td>
</tr>
<tr>
<td>• CYP thought to be drinking harmful levels: 1-1 brief advice or refer to external services</td>
</tr>
<tr>
<td>• Partnership working</td>
</tr>
</tbody>
</table>

### Prevention and early identification of alcohol use disorders (PH24, 2010)
Adults and young people aged 10+

<table>
<thead>
<tr>
<th>10 Recommendations:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Policy</td>
</tr>
<tr>
<td>o National: price, availability, marketing</td>
</tr>
<tr>
<td>o Local: licensing, resources for screening &amp; brief intervention for people over 16</td>
</tr>
<tr>
<td>• Professionals</td>
</tr>
<tr>
<td>o support to CYP aged 10-15 via safeguarding</td>
</tr>
<tr>
<td>o alcohol screening for age 16-17 thought be at risk</td>
</tr>
<tr>
<td>o extended brief intervention for ages 16-17 identified as drinking hazardously or harmfully</td>
</tr>
<tr>
<td>o referral for people over 16 who may be dependent</td>
</tr>
</tbody>
</table>

### Clinical guidelines

- Diagnosis and clinical management of alcohol-related physical complications (CG100, 2010)
- Diagnosis, assessment and management of harmful drinking and dependence (CG115, 2011)
Drug misuse: targeted prevention (NG64, 2017)

- Through existing services (CYP at risk of drug misuse commonly in touch with other organisations)
- Opportunistic assessment for those vulnerable to drug misuse eg health assessments for LAC, Youth Offending
- Skills training for CYP at risk, particularly LAC (including carers and families) to build resilience
- Depending on age and development level may be more appropriate to offer information on effects of drugs
- Provide information in settings where people at risk may attend eg nightclubs
NICE Quality Standard for prevention (QS165, 2018)

4 quality statements:

1. Looked-after children and young people having their annual health plan review are assessed for vulnerability to drug misuse

2. Care leavers having a health assessment as part of planning to leave care are assessed for vulnerability to drug misuse

3. Children and young people having a young offender assessment are assessed for vulnerability to drug misuse

4. Adults assessed as vulnerable to drug misuse are given information about local services and where to find further advice and support
NICE guidance on drug misuse management in over 16s

- Needle exchange schemes with specific policy for under 18s (PH52, 2014)
- Psychosocial interventions (CG51, 2007)
- Opioid detoxification (CG52, 2007)
- Psychosis with coexisting substance misuse – ages 14+ (CG120, 2011)

1. Needle & syringe programmes
2. Comprehensive assessment
3. Family & carer assessment
4. Hep B, Hep C, HIV testing
5. Treatment options: harm-reduction, maintenance, detoxification and abstinence
6. Psychosocial interventions from keyworker
7. Support to access other services eg housing, employment, education, benefits
8. Formal psychosocial interventions/psychological treatment
9. 6 months continued support after abstinence
10. Eligibility for residential rehabilitative treatment
Association of Directors of Public Health: policy position: drugs

• Prevention increasingly being integrated with treatment or other services concerned with reducing risky behaviours such as sexual health or truancy
• Education to encourage personal resilience should take place through PHSE, which should be made mandatory in schools
• Young people need to be provided with accurate information about drugs to allow them to make informed choices
• A holistic approach to drugs misuse prevention including building resilience in young people paired with drug misuse education programmes is recommended
• Would welcome increased screening and referral of young people at risk of substance misuse
• Drug treatment services should make themselves accessible to NPS users and understand their social and cultural backgrounds

Young people in treatment 2017/18

- At 31\textsuperscript{st} March 2018 there were:
  - 366 under 18s in treatment (down 16%)
  - 63 in secure estate
  - 39 over 18s in YP services
- 95% wait less than 3 weeks
- 70% had planned exits (England 81%)
- 23% drug free (England 33%)
- Main substances: cannabis (96%), alcohol (40%), nicotine (17%), cocaine (4%)

Knowledge gaps

- Numbers of children and young people with problematic drug use
- Knowledge about delivery of drug and alcohol education in schools
- Information from partners
Summary

• Rates of drug and alcohol misuse have reduced for under 16s, but class A drug use has increased among 16-24 year olds
• Rates of substance misuse in CYP appear to be lower in Birmingham than nationally
• Young people in Birmingham have significantly high levels of risk factors for substance misuse
• Unmet need in adult treatment services, particularly alcohol, impacts on children and young people
• Boys, white ethnic groups and young people in contact with Youth Justice are over-represented in treatment services
