PLEASE NOTE: Information contained within this report may contain restricted data or information which is not available to organisations outside of Birmingham City Council. The document and its contents may not be used, published or redistributed without prior written consent from Birmingham Public Health.

Foreword

All of us experience challenges at some point in our life, many are short-lived, and we move forward, but for some of us these challenges persist and become baggage that can weigh down our lives and make it hard to achieve our potential.

Some individuals face multiple challenges such as mental health issues, substance misuse and homelessness. Each one is significant, but when added together they magnify the impact making even simple tasks seem overwhelming and unachievable.

Sadly, it is easy to slip into an approach that responds only to the specific need that brought a person to the front door and not see the complexities that surround that individual and challenge them every day.

In my first annual report as a Director of Public Health for Birmingham City Council, I want to highlight the challenges that adults living with multiple and complex needs face and reflect on how we, as a city partnership, can make every adult matter.

The report sets out the data and evidence of the extent multiple and complex needs affect the lives of adults in Birmingham and aims to raise awareness of what really matters when it comes to preventing and tackling many of these problems. Through the shared stories of Bee and Dion, I encourage readers to reflect on how we can help individuals facing multiple complex needs to live fulfilling lives.

I hope that this report inspires action across the city to make every adult matter in Birmingham and support all citizens to thrive.

A handwritten signature in black ink, appearing to be 'J. Varney'.

Dr Justin Varney
Director of Public Health
Birmingham City Council

I am really pleased that this year's Director of Public Health Annual Report focuses on the most vulnerable adults in our city who may have 'fallen through the cracks' of our care system. We need to use this report to reflect on our work in this area and learn how to continue to improve our services to achieve better outcomes for those most at need.

Whilst many of us might experience complex needs at some point of our lives, none of us should struggle on their own. As the Portfolio Holder for Health and Social Care and as the first Mental Health Champion for the City Council, I am keen to ensure that every person who lives in our city has the opportunity to achieve their full potential.

It is important to acknowledge the effort and investment that has already been made to support our citizens with multiple complex needs to transform their lives. We have seen a significant reduction in our rough sleeping population since the previous count through greater partnership work and targeted support and intervention. We are working more closely together across the wider health and care system to prevent crisis through our joint strategies and service models, but we know that more can and must be done.

The challenges of working across a multifaceted system to address complex needs of vulnerable individuals remain considerable. Therefore, it is important that together with all our stakeholders, community and voluntary groups, commissioned services and with health partners we are able to identify issues early and avoid a high cost to people's health and wellbeing, their lives as well as the public purse.

I hope that this report will provide the opportunity through system partnership to develop a joint upstream action. I hope it will stimulate further a commitment to work collaboratively and act on the Director of Public Health recommendations as well as work towards turning the complex lives of many of our citizens into fulfilling futures.

A handwritten signature in black ink that reads "P. A. Hamilton". The signature is written in a cursive, flowing style.

Cllr Paulette Hamilton
Chair of the Birmingham Health and Wellbeing Board
Portfolio Holder for Health and Social Care
Birmingham City Council

1. Introduction

“The core purpose of the DPH (Director of Public Health) is independent advocacy for the health of the population and system leadership for its improvement and protection” (Association of Directors of Public Health, Faculty of Public Health 2016).

The DPH annual report is a way for providing advice and recommendations on population health to both professionals and public, complementing information available within the Joint Strategic Needs Assessment (JSNA) and local health profiles. Its purpose is to influence local policies defining the wider determinants of health.

Findings and recommendations in this report have been based on a thorough study of the journeys of those with multiple complex needs as well as success and gaps in support available across the wider health and care system in Birmingham.

The focus of the study was the consolidation and analysis of all available statistical and service use data across four main disadvantage domains:

- homelessness
- substance misuse
- mental health
- offending.

The latter has been based to a large extent on information shared by the probation service, as it had been difficult to obtain the police data within the study’s time constraints. Therefore, it must be acknowledged that whilst the themes and trends that have emerged from analysis may be similar, the findings may be incomplete.

The study is complemented by qualitative research, which includes a wide-ranging literature and policy review as well as findings from three focus groups and a rapid ethnographic research.

The semi-structured focus groups were carried out by the Birmingham Public Health' Inequalities Team with three distinctive cohorts of participants to gather city specific insight into multiple complex needs. Focus groups were conducted with:

- Department for Work and Pensions (DWP) front-line staff from across Birmingham in order to determine the challenges they face as a result of an introduction of the Government's work and health policy¹ and the Universal Credit. Both place more responsibility on DWP to carry out health and wellbeing assessments and provide tailored wellbeing and coaching support to facilitate a higher number of people with complex needs into becoming economically active;
- female service users with multiple complex needs in order to understand the challenges that specifically women with multiple complex needs face and how their experiences may differ from those of men;
- peer mentors from Birmingham Changing Futures programme² who provide a lead worker support to the most entrenched individuals experiencing multiple complex needs, including rough sleepers.

The three focus groups were structured by six topics: family composition, common crisis points and vulnerabilities, access to services, service successes, service failures, gaps in service provision. Findings were analysed by the Knowledge, Evidence and Governance Team (Birmingham Public Health) to identify key themes as well as compare the service user and professional perspectives on gaps and needs.

Rapid ethnography was commissioned to develop the insight presented in this report further and to illustrate what daily life and struggle with multiple complex needs is like.

2. Understanding Multiple Complex Needs

2a. Defining Multiple Complex Needs

'I don't want to live anymore. I don't want to go on anymore. Because everything I care about has been taken away from me. Whether it's through substances, social services, police, you name it – everything I know and care about has gone from me.'
(Rough Sleeper in Birmingham)

The above quote pretty much defines what life with multiple complex needs, including mental health, substance misuse and homelessness, is like from the perspective of personal experience of the deepest crisis.

Looking through a professional lens, multiple and complex needs (MCN) describe interrelated health and social care needs of disadvantaged individuals which are often enduring and highly problematic, effecting day to day living, life chances and social functioning as well as resulting in economic and social costs where support is inadequate. In many cases the problems develop from trauma and those facing multiple needs often live in poverty and experience stigma and discrimination.

Several terms are used to describe multiple and complex needs in published literature. Terms such as 'Severe and Multiple Disadvantage' (SMD)³ and 'Multiple and Chronic Exclusion'⁴ are also used to describe similar cohorts of individuals, though the main areas of need or disadvantage are broadly consistent. They are most commonly:

- homelessness
- mental ill health
- substance misuse and
- contact with the criminal justice system (offending).

In some cases, this definition is wider as factors of worklessness and mental health can also add to the complexity and challenge of addressing MCN. Also, it is recognised that experience of domestic abuse and violence, separation from children and social inequalities often contribute to women's severe and multiple disadvantage⁵.

³ Lankelly Chase Foundation (2015), *Hard Edges: Mapping severe and multiple disadvantage*, England.

⁴ Fitzpatrick, Bramley, Johnsen (2013), *Pathways into multiple exclusion homelessness in seven UK cities*. *Urban Studies*, Jan 2013, 50(1):148-68.

⁵ McNeish and Scott (2014), *Women and Girls at Risk, Evidence Across the Life Course*, DKMS Research.

MCN relate to both the multiplicity of need (more than one interconnected need) and depth of need (profound, severe or intense needs)⁶.

Making Every Adult Matter (MEAM) approach⁷ details three criteria to identify people facing multiple needs and exclusions:

- Ineffective contact with services: Despite often looking for help, people with multiple needs face challenges when services are designed to only meet one need, or they fail to meet individual service thresholds and no single organisation takes overall responsibility.
- Chaotic Lives: One need may lead to another and often become a downward spiral especially where they are interlinked, and individuals become trapped in chaotic lives, often since early childhood, and are unsupported.
- Experiencing several problems at the same time: One main need may be complicated by others or multiple lower level needs may become problematic together.

Based on research underpinning the Fulfilling Lives⁸ programme and its many evaluations, MCN can be associated with lifelong disadvantage and inequalities that impact on the individual, their interactions with services as well as their interactions with others, often starting from early on in life and escalating throughout the life course up to the point of crisis.

7 Battrick, Hilbery, Holloway (2013), Findings from the Making Every Adult Matter (MEAM) service pilots: a summary paper, *Advances in Dual Diagnosis*, 2013 May, 17;6(2):66-75.

8 Funded by the National Lottery Community Fund, the nationwide Fulfilling Lives programme has been developed to improve services for people with multiple and complex needs; <https://www.fulfillinglivesevaluation.org/>.

2b. What is the bigger picture?

“The house of children whose parents are addicted to crack-cocaine: Dad has passed out on the mattress in his own vomit, mum is crouched over a table, preparing her fix. What you don’t see is the child hidden in the corner crying.”

This quote opens the Coalition Government’s strategy from 2012, Social Justice: Transforming Lives, developed following the Marmot’s Review 2010⁹ and setting out “an ambitious new vision for supporting the most disadvantaged individuals and families in the UK”. That vision was based on two principles: **prevention throughout a person’s life**, with carefully designed interventions to stop people falling off track and into difficult circumstances, and a **‘second chance society’**, in which anybody who needs a second chance should be able to access the support and tools they need to transform their lives.

Following this strategy, initiatives for families affected by MCN were prioritised with the Troubled Families¹⁰ programme being one of the more successful ones. What appeared to be given less of a priority at the time was the support to single adults without dependents.

Despite a considerable focus on tackling multiple disadvantage in the past decade across the UK and in Birmingham, inequalities appear to be increasing. A follow-up report by Sir Marmot has now been published and examines further health inequalities and their cost to the society and to public services. Sadly, it reports that health inequalities in the country are widening and calls for a system-wide action to address inequity of support through effective prevention and early intervention that will reduce future costs¹¹.

Whilst estimating the scale and true cost of MCN is difficult, a national study suggests that average public expenditure for a person with MCN is £19,000 (of which £6,020 is welfare benefits) per annum; more than four times the cost of £4,600 for an average individual¹².

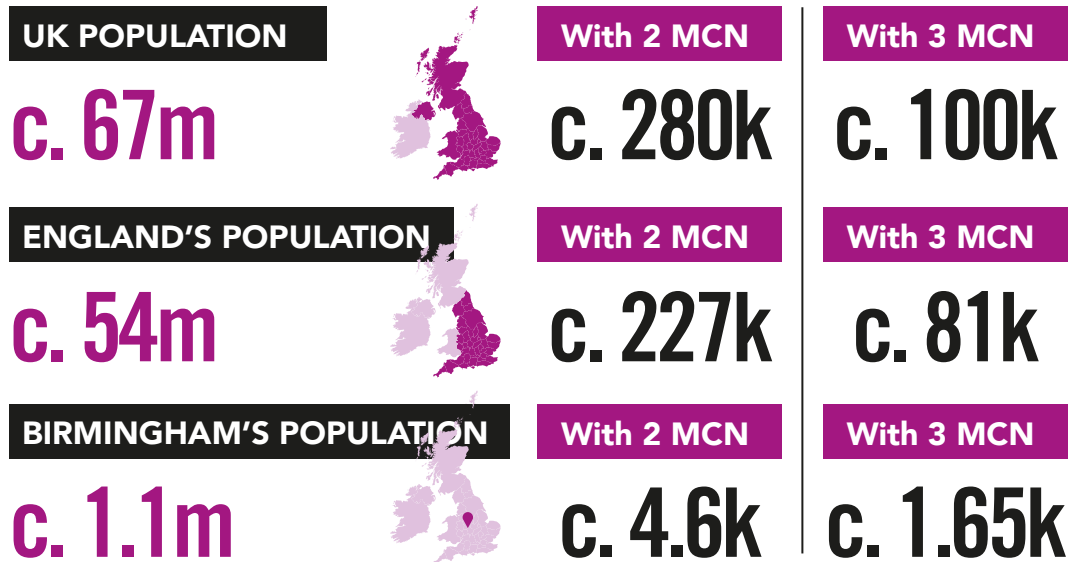

9 Marmot (2010), Fair Society, Healthy Lives, Strategic Review of Health Inequalities in England post-2010.

10 The Troubled Families programme is a UK Government scheme under the Department for Communities and Local Government with the stated aim of helping troubled families turn their lives around (<https://www.gov.uk/government/publications/national-evaluation-of-the-troubled-families-programme-2015-to-2020-findings>).

11 Marmot (2020), Health Equity in England: The Marmot Review 10 Years On.

12 Lankelly Chase Foundation (2015), Hard Edges: mapping severe and multiple disadvantage, England.

The Lankelly Chase Foundation estimates that over a quarter of a million people in England experience at least two out of three of the homelessness, substance misuse and offending which equals 4.2 people per one thousand.

Source: Proportion of persons experiencing two complex needs using the estimate above (based on ONS population estimates from 2019)

The research also estimates that 1.5 per one thousand people of working age are likely to experience all three of the complex needs.

The study, which focused to a large extent on the rough sleeping population, also found that those experiencing MCN were predominantly white males, aged 25-44 years with history of marginalisation and childhood trauma. 90% of the homeless population are likely to be single homeless rather than family homeless.

Though note street sex work, marginalisation and childhood trauma closely interrelated with some of these more extreme manifestations of MCN, is dominated by women (Fitzpatrick et al, 2013).

We have found out that even amongst people with the most complex needs (all three), almost 60% either live with or have ongoing contact with children.

3. The Story In Birmingham

3a. How do we compare nationally?

According to research carried out by Lankelly Chase Foundation¹³, Birmingham belongs to a group of 24 Local Authority areas with the highest prevalence of MCN and takes 18th place in the ranking¹⁴.

Table 1: Index of Local Authorities with the highest prevalence of SMD based on data for England 2010/11
(where 100 is the national average)

Source: Hard Edges, Lankelly Chase Foundation 2015

Local Authority (SS)	SP	OASys	NDTMS	Combined
1. Blackpool	378	299	244	306
2. Middlesbrough	152	306	387	281
3. Liverpool	265	200	249	238
4. Rochdale	310	183	184	226
5. Manchester	245	212	217	225
6. Kingston upon Hull	251	191	232	224
7. Bournemouth	266	177	218	220
8. Nottingham	260	199	181	213
9. Stoke-on-Trent	193	215	224	210
10. Newcastle upon Tyne	271	186	167	208
11. Leicester	219	196	187	200
12. Knowsley	179	143	271	197
13. Derby	323	159	110	197
14. North East Lincolnshire	227	140	208	191
15. Blackburn with Darwe	122	235	216	191
16. Camden	239	125	199	188
17. Islington	174	175	205	185
18. Birmingham	171	162	217	183
19. Coventry	216	165	161	181
20. Tower Hamlets	188	140	210	179
21. Westminster	193	96	236	175
22. Plymouth	262	101	162	174
23. South Tyneside	123	157	238	173
24. Bristol	187	159	162	169

Based on the same research, we would estimate that in Birmingham around 7,100 people meet the criteria of at least one complex need and a mental health issue, and overall, just over 19,700 people have at least one category of MCN.

¹³ Lankelly Chase Foundation (2015), Hard Edges: Mapping severe and multiple disadvantage, England.

¹⁴ The ranking is based on three national data sources from 2010-11: Offender Assessment System, National Drug System Monitoring System and the Supporting People Client Record and Outcomes for Short-Term Service data. Other evidence and measures are available which could or could not result in the same ranking.

ESTIMATED
19,700 
 people in B'ham have **at least one complex need**

ESTIMATED
7,100 
 people in B'ham have **one complex need and a mental health issue**

Based on Lankelly Chase research applied to Birmingham population

Table 2: Estimates of MCN (referred to as SMD) in Birmingham

Source: Hard Edges, Lankelly Chase Foundation 2015

Severe Multiple Disadvantage Category	Rate per 1,000 population		Estimated Numbers of People		
	Birmingham	National Average	Overall	With Mental Health Problems	% with Mental Health Problems
SMD1: Homeless Only	5.3	1.9	3,640	480	13%
SMD1: Offender Only	5.8	4.4	3,950	960	24%
SMD1: Substance Misuse Only	6	5.4	4,070	2,350	58%

SMD2: Homeless & Offender	1.4	0.8	960	340	35%
SMD3: (Based on Supporting People data)	3.6	1.7	2,450	1,150	47%
SMD3: (Based on Offender Assessment data)	2.1	1.4	1,410	750	53%
SMD 1-3	29	17.4	19,720	7,110	36%

3b. How do we measure locally?

Homelessness

Homeless households often contain some of the most vulnerable people in the city that have higher health and social needs than the general population.

In 2018-19, almost one household in every one thousand in the city was not in priority need and therefore not eligible to be housed. Individuals in such households may not present formally to local housing authorities as homeless and having MCN, and as a result have a high risk of rough sleeping and developing associated problems.

The introduction of the Homelessness Reduction Act 2017 provided a further safety net for single homeless who were entitled to have a personal housing plan completed to assist in preventing or relieving their homelessness. The challenge is to create the paradigm shift required to ensure that single homeless with MCN are supported and made aware of their entitlement to receive support around their homelessness when they declare their complex needs. Birmingham has maintained investment in supporting single homeless predominantly through the voluntary and third sector, and the development of the system of joint statutory and third sector support for single homeless is one of the aims of the Birmingham Homelessness Prevention Strategy.

Figure 1: Statutory homelessness - Eligible homeless people not in priority need 2017/18

Source: Public Health England¹⁵

15 Public Health England, Public Health Profiles. - August 2019; <https://fingertips.phe.org.uk> © Crown copyright [2019]

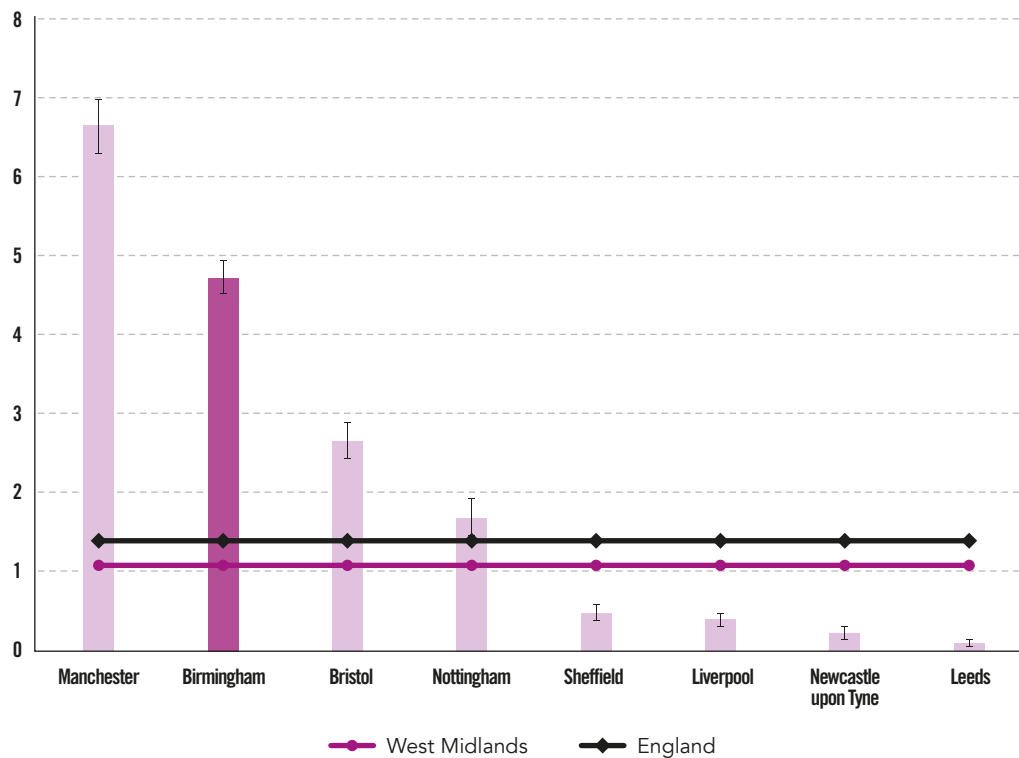

In addition, Birmingham has one of the highest of the core cities number of households in temporary accommodation as a rate per 1,000.

Source: PHE/Ministry of Housing, Communities & Local Government 2017/18

Figure 2: Statutory homelessness - households in temporary accommodation (2017/18)

Source: Public Health England and Ministry of Housing, Communities & Local Government¹⁶

Between 2009 and 2015, 24,562 persons presented to Birmingham City Council as homeless or at risk of being homeless within the next eight weeks. The only recording available to indicate whether these persons may have had MCN was the Homeless Priority Reason recorded within their application (it should be noted that

¹⁶ Public Health England. Public Health Profiles. - August 2019; <https://fingertips.phe.org.uk> © Crown copyright [2019]

only one reason used to be recorded and as such this may have resulted in under-recording of additional presenting needs¹⁷).

The main priority reasons recorded through homeless applications included having dependent children, overall these accounted for 41% (10,099) of applications.

Source: Birmingham City Council

Substance misuse accounted for less than 5% of the recorded homeless priority reasons, and mental disability accounted for 4% (970) of all applications. Again, if these issues are not identified in the homeless applications to the local authority, the individuals are not assessed to have that priority need, and this may result in under-recording of the true prevalence.

Drugs and alcohol are the leading cause of death for people sleeping rough or staying in an emergency accommodation in the city. Between 2013 and 2018 this accounted for 19 deaths¹⁸.

It is worth pointing out that many homeless people may not be visible to the care system. Anawim, a Birmingham charity supporting women with MCN, reported some of their clients, who may have not presented as experiencing MCN to the local authority, were using friends' accommodation or squats.

¹⁷ Analysis of data recorded by the new HCLIC system, which captures information on those presenting as homeless, needs to be undertaken, as will provide information on wider needs of the homeless population.

¹⁸ ONS - Deaths of homeless people (identified) by underlying cause of death, Birmingham, 2013 to 2018 (bespoke mortality reporting).

Substance Misuse

It is estimated that 14 per every 1000 people between ages 15 and 64 in Birmingham are opiate and/ or crack cocaine users.

Source: PHE: Public Health Profiles 2016/17

Opiates refer to heroin and painkillers such as morphine. Around 40% of opiate users are not in treatment and therefore may not have any contact with services. Based on evidence, treatment is completed by around 40% of non-opiate users, but only by 6% of opiate users¹⁹.

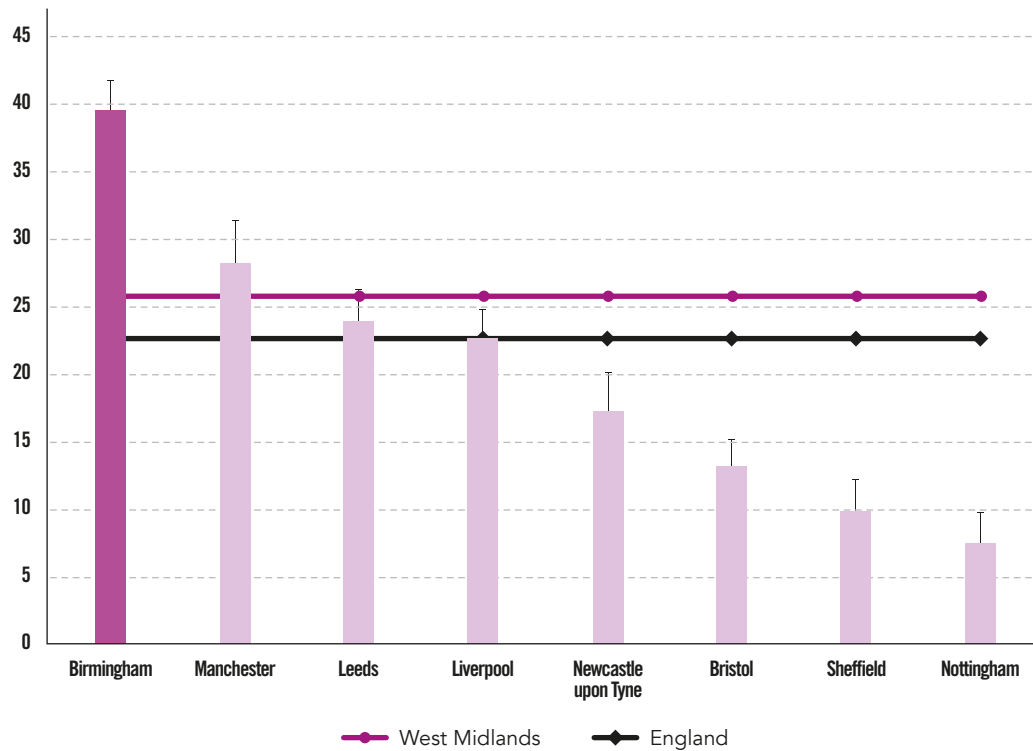

Around 40% of individuals, who entered treatment at a specialist drug misuse service, were in receipt of treatment from mental health services for a reason other than substance misuse at the time of assessment. This is significantly higher than England, the West Midlands and the other 'core cities' and may reflect better recording in Birmingham and/ or higher prevalence.

It is important to note that the prevalence data is only available for opiates and alcohol, and it is recognised that substance misuse is much broader and includes other drugs such as cannabis, synthetic cannabinoids, prescription medication, steroids and "club" drugs.

¹⁹ Public Health England. Public Health Profiles. [August 2019] <https://fingertips.phe.org.uk> © Crown copyright [2019]

Figure 3: Concurrent contact with mental health and substance misuse services for drug misuse (%) - 2016/17

Source: Public Health England / National Drug Treatment Monitoring System 2016/17²⁰

Alcohol can have equally devastating consequences as drug misuse. There were 25,875 admissions in Birmingham in 2018-19 for alcohol related conditions.

c. 26,000
hospital admissions
in B'ham for alcohol
related conditions
(2017-18)

Source: Public Health England

It is estimated that over 80% of dependent drinkers are not in treatment and only 43% of those entering treatment complete it successfully²¹.

In 2018-19 almost 7,000 assessments were undertaken by the local substance misuse service provider Change Grow Live (CGL). The majority (75%) were for

²⁰ Public Health England. Public Health Profiles. [August 2019] <https://fingertips.phe.org.uk> © Crown copyright [2019]

²¹ Public Health England. Public Health Profiles. [August 2019] <https://fingertips.phe.org.uk> © Crown copyright [2019]

male service users between the ages of 35 and 44 (44%). As a rate per 1,000, the most prevalent ethnic groups were white and mixed (8 per 1,000 for each group). Half of service users did not have children. Of those that had children, the majority did not live with them²².

Figure 4: CGL Client Parental Status – 2018/19

In terms of multiple needs, almost 2,000 referrals to CGL came from criminal justice - 35% (this may be related to the Criminal Justice System’s duty to refer), 19% had housing problems and over a third of people had mental health needs. Though it was not possible to cross-tabulate needs, we can assume that as an absolute minimum around third have at least one need additional to substance misuse problems, though this is likely to be higher. Applying the ‘Hard Edges’ research estimates, around 55% would have one additional need (either offending or homelessness).

7000 referrals into CGL in 2018/19:

35% from criminal justice
19% had a housing problem
34% had mental health issues

Source: CGL

²² Open Recovery Assessments between 01/04/2018 and 31/03/2019 - data provided by CGL.

Mental Health

We know that 1.19% of people in Birmingham have serious mental illness such as schizophrenia, bipolar affective disorder and other psychoses, and 10% are diagnosed with depression.

OVER **16,000**

people (all ages) in Birmingham
have **serious mental illness**

Source: QoF- NHS Digital 2018/19

This only captures those people who are registered with a GP and who have a recorded diagnosis which again highlights the complexity of capturing data on the more isolated populations such as the homeless and new migrants.

Source: NHS Digital & Adult and Social Care Outcomes Framework 2018/19

In 2018-19, only 64% of adults in contact with secondary mental health services lived in stable accommodation. This is slightly better for females than males and may potentially be linked to family composition or housing eligibility.

In 2018-19 the Birmingham and Solihull Mental Health Foundation Trust (BSMHFT) received 43,337 referrals²³ (including sub-referrals when a patient has been referred to more than one service or team type) for adults aged 18+ living in Birmingham. 51% of referrals were for female patients and 55% of referrals were for patients from a white ethnic group. The largest groups as a rate were Black/ Black British (39 per 1,000) and White/ White British (38 per 1,000). 24% of people were 25-34 and 21% were 35-44 years old.

Only around 2% had a recorded substance misuse issue. This has been assessed by commissioners (Adult Social Care and Clinical Commissioning Groups) as very low and a likely underestimation, which may reflect issues with referrals being accepted for clients with dual (addiction and mental health) diagnosis. Only 3% of BSMHFT patients had a recorded status of non-settled accommodation. It is also important to note that there are recognised limitations with data quality in the Mental Health Service Dataset.²⁴

Criminal Justice

Offending behaviour is often linked to mental health and substance misuse issues, and offenders experience significant health inequalities.

Around 12,000 offences were recorded in the city in 2017-18. There were approximately 2,600 first time offenders in 2018, and it is estimated that of all offenders around a third go on to reoffend²⁵.

²³ The number of referrals excludes those that were not accepted.

²⁴ The latest national Data Quality Maturity Index (DQMI) score for MHSDS (NHS England) was 71.9%, hence there are still data quality issues with the dataset.

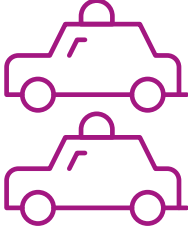

²⁵ Public Health England. Public Health Profiles. [August 2019] <https://fingertips.phe.org.uk> © Crown copyright [2019]

Figure 5: Rate of first-time offenders based on recorded (via Police National Computer) crime data per 100,000 population aged 10+

Source: Public Health England /Ministry of Justice 2018²⁶

West Midlands Police estimate that approximately 95% of referrals to the Force’s Vulnerability Team received through the online portal²⁷ were for people with MCN living in Birmingham. This equates to almost 4,950 out of 5,200 referrals in 2019 and does not include incidents reported through alternative referral methods. Data relates to those who gave consent to be referred for support into a partner organisation.

4,950  **online Police referrals for adults with MCN living in B’ham**

Source: West Midlands Police estimates for 2019

²⁶ Public Health England. Public Health Profiles. [August 2019] <https://fingertips.phe.org.uk> © Crown copyright [2019]

²⁷ This system captures cases where concerns around the vulnerability of individuals are reported by other departments of the police force or members of the public.

There were 1,185 cases managed by the National Probation Service' Birmingham Local Delivery Unit as at 7 January 2020²⁸. These consist of offenders in three categories: (a) community – an individual with community order or suspended sentence order; (b) post-release – offenders on licence; (c) pre-release – offenders currently in custody. Of the 1,185 records 36% (421) had a register description of mental health issues and/ or a description of a mentally disordered offender. An additional field indicated that 9% (111) persons were recorded as having no fixed abode.

MCN specific service data

In 2019, Anawim received 1,025 referrals. They estimated that 76% of women referred to their service presented with five needs or more, 39% presented with 7-10 needs each and the most common need was mental health. Anawim use more need categories than the standard definition and include domestic violence amongst others.

Around 42% of their service users have children and around a quarter of those who stated their ethnicity were White British. The majority of Anawim service users were 26-35 (31%) followed by 36-45 years of age (27%)²⁹.

Source: Anawim 2019

²⁸ Data provided by National Probation Service Birmingham Local Delivery Unit.

²⁹ Data provided by ANAWIM.

Figure 6: Percentage of service users by need for a period of 12 months to November 2019

Source: Anawim

Source: Anawim 2019

Data provided by the Birmingham Voluntary Service Council (BVSC), who lead on the Changing Futures Together programme³⁰, suggests there is a higher level of MCN in Birmingham than it had been anticipated by the organisation originally. It was estimated that 156 of the most entrenched individuals (with three or more of homelessness, problematic substance misuse, reoffending and mental ill health needs) would receive support from the programme between December 2014 and June 2019. This figure was exceeded in the first two years and continues to grow.

2018-19 data from their Lead Worker Peer Mentor Programme (LWPM), which provides a one to one support by a trained mentor with lived experience, shows that 130 people accessed the service. Of these 64% were male. The largest proportion of service users were 35 to 44 years old (34%), followed by 25 to 34-year-olds (20%), and majority of service users were of white ethnicity.

³⁰ Data extract from Birmingham Changing Futures LWPM cost benefit report 2018/19.

PROFILE OF LWPM SERVICE USERS

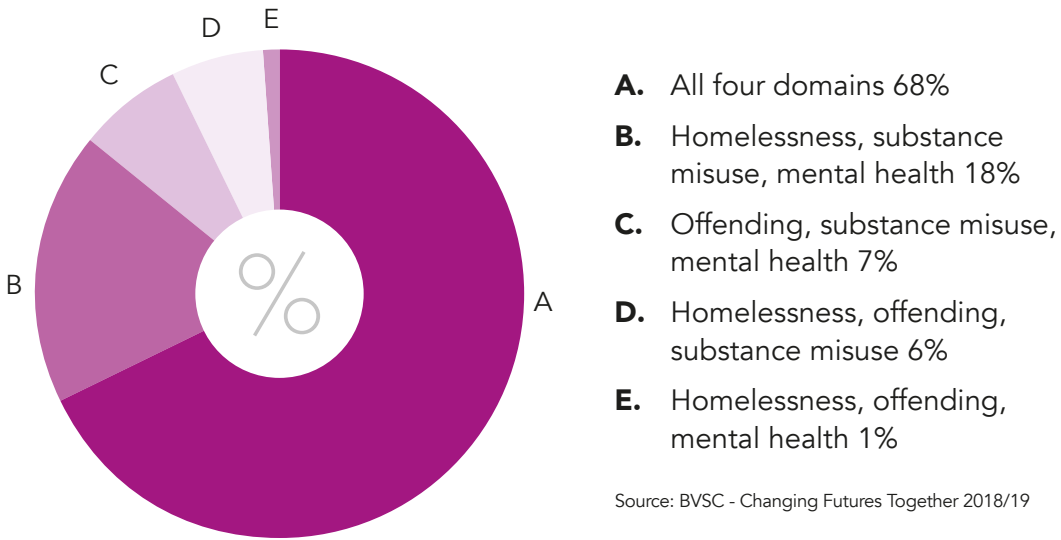

Source: BVSC – Changing Futures Together

Changing Futures captures data on specific need domains. Over two thirds of service users had needs in all four domains, though this was more common in males than females with 74% of males having needs in all four areas compared to 57% of females. This suggests a potentially different pattern of need and intervention required for different genders which is supported by published research³¹.

³¹ Agenda, AVA and Burrow Cadbury Trust (2014), Mapping The Maze: Services for women experiencing multiple disadvantage in England and Wales.

Hospital episodes statistics data collected during inpatient visits in 2018-19 shows we had 6,845 admissions of Birmingham residents with MCN (classified in this instance as two or more of mental ill health, homelessness or substance misuse needs) out of a total of 391,172 general admissions - this equates to 1.7%. Over the past 10 years, the MCN rate has been mostly static at 1.6 or 1.7%. Such recording would in some instances be reliant on the person declaring these diagnoses or the diagnoses being relevant to that admission.

4. Meet Bee And Dion

To complement the findings from data analysis and develop a greater understanding of what life of a person experiencing multiple complex needs living in Birmingham looks like, two case studies have been developed using an ethnographic research methodology.

In January 2020, an experienced ethnographer worked with two people in Birmingham who fell into the category of having MCN. Below are the written accounts of that work. The stories have been anonymised as far as is possible whilst retaining the critical features of the places in which the work was carried out. While reading them, it is worth remembering that no individual story need match a macro picture, and that no individual will perfectly reflect statistical trends. Furthermore, ethnographic work like this can yield rich pictures, but also coarse ones. For that we make no apology.

It is also worth remembering that these two accounts alone should not be used as evidencing the full extent of a 'system' or any particular service, or a population of certain kinds of people. In the sense that they rely to some extent on self-reporting, and on self-confessed unreliable witnesses, they should also not be seen as being unfailingly 'true'. What they are, are honest accounts of a day in the life of two people living and trying to get on, in Birmingham.

Bee, 45 years old

"It's like they *wish* I was being abused!" "What do you mean?" "It's like if I was being abused, they would know which form to pull out. They don't want to hear that I'm fine. I'm in a relationship. With a man. And he doesn't abuse me." Bee is talking about a women's outreach centre that she has been attending for years.

But Bee *has* been abused. She has worked in the sex industry where abuse, she says, was the norm: "When other women [who did the work she did] tell me they've been raped, I just tell them to get over it. Get on with it. That's what I did. Move on. It's normal. You can't let it get you down."

The abuse that Bee has suffered isn't the root cause of all the problems she now faces. It doesn't dictate all the decisions, good and bad, that she makes. It is a bitter part in a life of peaks and troughs; one of many traumas that may one day be properly dealt with or may not. Bee is also often fierce like this: about other people that can't keep up with her, about services that she feels don't properly listen, about the 'nana heads' on [the] road, and with herself and her own struggles with addiction and the legacies of bad choices and bad luck.

Bee drinks. She starts early in the day with a can of beer and then drinks slowly throughout. Sometimes she will be out of her house early, on others she may never leave, spending the day laying on her sofa and watching Netflix. When the weather is cold, she says, there are fewer people out ('on road'). There's less going on. Less happening.

This is the SAFE waiting room. Bee has been a regular attendee for many years.

Nonetheless, today, cold though it is, she has a doctor's appointment. "Pills are easy. I always get lots of pills. I have manic dep... [correcting herself] bi-polar. They changed the name, but it's the same." The clinic she attends is clean and welcoming, a friendly, if institutional, space. The only sign that this is not an everyday GP's surgery is the prominent security guard sitting behind a desk at the entrance. The staff are friendly even as Bee barks requests and instructions to them from the back of a short queue. It's 10 minutes before the start

of her appointment: "Am I early? Don't say I am early. I can't wait. I can't wait in here." Bee is visibly uncomfortable. She sits. Stands. Sits again. The staff say that the doctor won't be a moment. It's too much for Bee. She walks out. It's not the place specifically, she says, it's all queues. She tells a story about how she had been physically forced to leave a shop only the day before because she looked like she was going to hit someone in a queue. She says she wouldn't have.

This is where SAFE is.

On the way back to her house, she stops to buy a second can of beer from a grocer's. There is a man standing outside. She knows him. He is impassive as she asks him if he is ok or needs her help. On her way out she gives him enough money to buy a can for himself. He thanks her and goes in behind her. "I used to drink with his brother. I loved him. But he died last year."

Her home is not far away but she opts to ride the bus. After a stop or two, another woman gets on, close in age to Bee but her clothes are shabby compared to Bee's ostentatious long-coat and beads, and her mouth is toothless when she smiles, unlike Bee's confident grin. They know each other. The new passenger sits on the opposite side of the aisle and loudly recounts lurid tales of a couple, each heroin addicts, that she and Bee both know. Some other passengers turn their

heads away pretending not to hear. Bee joins in the banter, but later confides that she seems to attract 'all the crazies' and that the woman on the bus shouldn't be considered a friend. She also, privately, confides that she herself has bit of an addiction problem beyond drink, but to keep this quiet, as the people around her in her life don't know.

Back at her house, Bee introduces her housemates. They drink too. Bee gives them some money for beers, and they go out. Bee thinks that one of them sometimes steals from her when she is not there and points to padlocks crudely fixed to her kitchen cupboards. But she also cares for them. She is better with money, and better at avoiding trouble, and this puts her in a slightly authoritative role: "Queen Bee". She tries to settle down when they have gone, but she is antsy. Today is not one of her 'staying in' days. She wants to get back on the street, to 'hustle', and she has a plan to go and see a friend.

Changing Futures is in here, which Bee speaks well of.

The plan is convoluted. Bee has a friend who helps her out. He's older and retired and has time for her. Bee has asked him to come around in his car and to take her to see another friend, Alice, which he happily agrees to. The plan involves going into a formal place of work, so Bee stashes her fresh beer can under her coat. At the front desk reception, she listens with wide eyes to the directions she is given to find Alice. It quickly becomes apparent that she couldn't take them in and has to ask almost everyone she

passes for more directions ("I have such a bad memory you know. I'm not even joking. It was the drugs. Before."). She has to journey through the building in small increments. Eventually, she gives up and calls Alice on her phone. Alice emerges from a corridor and rushes over to greet Bee. Bee gives her a £5 note and asks if Alice will cook dinner for her the next day. Alice agrees with a smile and rushes back to work. The whole encounter is over in seconds. And then Bee turns to try and find her way out of the labyrinth, and back to the car that is waiting for her in a no-parking zone...

On the way home, Bee asks to be dropped on the main road instead. She wants to find people. She warns that some of them could be dangerous. Not too long ago she had received a number of death threat letters to her home, though is not sure why, or who they might have been from. In the event, she finds lots of people. The road, a busy shopping street packed with charity shops, takeaway restaurants, cheap supermarkets and newsagents, is full of people that call out

to her. None of them are using the shops and services. They are all drinkers, and many are also addicts, she says. They are just moving up and down the street, as if on conveyor belts, finding each other and looking for *opportunities*. Bee exchanges pleasantries, sometimes ostentatiously, sometimes cautiously. But she is looking for another kind of person, someone who might have just got 'paid' in fact. Someone from whom she might be able to call in a favour: a bit of money, or a drink. This is 'hustling'.

The bar near the drinkers' park, where Bee was allowed to sit.

Avoiding a pub that she sometimes goes to because there is no one in there she knows she can trust; she moves to find somewhere quieter and emptier. Eventually she tries a bar she often goes to. She thinks some of her better acquaintances might come into the bar on their way there. The staff know her and turn a blind eye to the can of beer she is already carrying. Once in the bar, there is little else for her to do. Bee slumps and waits, but the bar is empty and it's not clear exactly what she is waiting for.

She is also getting tired. The previous night had been disturbed when a 'gang of kids' broke into the house opposite her own. Bee and her housemates suspected that it had been to do with drugs and claimed to have seen this with their own eyes ("The police never even came! They still haven't come." "Did any of you call the police?" "No way!"). Certainly, there was plenty of evidence for what had happened visible to the naked eye, but Bee says that the gangs are dangerous. She points out several places in the streets near her house where they seem to act with impunity and warns not to take pictures. She tells a story of a friend who was stabbed and almost died, 'for nothing', when he was just walking past them on his way home, and then, shockingly, of how she and another friend of hers had recently been car-jacked by some young boys with a machete. The gang had taken the car and left her and her friend shivering with fright in the street.

Despite all of this, Bee insists that her life is not currently at a low ebb. In fact, she has the opportunity to move to a new home, which she will do initially on her own. She has plans to make it how she wants it before inviting anyone else (including her boyfriend) to come and stay with her. She has been desperate to escape from the area she currently lives in ("It's not safe!"), so this chance is a good one. She is also reasonably stable mentally, she says, and has been able to rekindle some relationships with family members, and maintain friendships with people like Alice, who live 'like normal'. She has a plan to kick her more recent drug addiction too

and has already told a local service provider about it in order to start this process off (“... but they need to give me respite. I’ve had it before. It’s amazing! I need to be sent away for like a couple of weeks and use, you know, the substitute. To get it together and then get on ...”).

The troughs were worse. Bee says that she had been good at school, outgoing and reasonably successful, but at 16 had suffered a mental breakdown: “That’s when things started going wrong.” Since then, she says, she has suffered some 15 or 16 similar breakdowns. Each one has involved significant memory loss, long stays in hospital, and some kind of traumatic consequence. It is the breakdowns, she says, that ruin everything. In the past, such breakdowns have led to her having a child removed from her (and from whom she is now permanently estranged), a trauma from which she says she cannot entirely recover. She has lost housing because of things she has done during breakdowns. And she has lost work (which she would love to get back to but recognises that this seems a long shot now).

She has also lived on the streets, including a long period living behind some industrial bins with a partner she had met (“having a man can keep you safer you know?”). This relationship kept her out of housing for a long time as she felt she couldn’t leave him even when she was offered more permanent accommodation. It also meant that she prolonged an addiction to crack cocaine (“That’s bad stuff. I have no memory anymore. I can forget things that have only just happened”). Living on the streets, she says, was the worst time of her life.

This is Bee: peaks and troughs. As the day draws to a close, she reflects on her own personality. Is it a good thing that she is such a character? That people know her? Does that attract trouble? Or does it keep her safe, and give her a network to draw on? Probably both, she decides, but she also knows that it means that every day is unpredictable. Staying at home is safe, but not realistic. And the more she is out, the more she accumulates colourful pieces in her jigsaw life. Her parting remarks reflect the danger: “You should have visited me in the summer. There is so much more going on then. [She winks] It would have been like an all-day party!”

Dion

Dion is frustrated. He lost his phone a week ago and it is beginning to cause him problems. He has a new phone, but it has a new number, and he has lost his contacts. He explains that he had lent his previous phone to a friend, another homeless man in Birmingham, and had been due to get it back a couple of days later. Unfortunately, the other man had committed a serious crime the very night that Dion had lent him the phone, and had been taken away by the police, with Dion's phone. Dion didn't expect to get it back.

Not having his phone means that there are a couple of trips, outside of his usual routine, that he must make. He is dressed for the cold weather: a thick winter jacket, tightly woven trousers with multiple pockets, a woollen hat, and a good pair of boots. He is in his late 50s, and still physically strong, though his face attests to the ageing properties of too much alcohol and years of living outdoors, and he has underlying health problems that are likely to become more visible in the near future than they are today.

At around the same time that he lost his phone, Dion had managed to secure a bed in a small house run by a registered social landlord. There is a spare room at the house and the landlord has given Dion a week to find someone to fill it before he finds someone else (a potential risk for Dion who has had bad experiences with unexpected housemates in the past). Dion has told a friend about it, but that friend now has the wrong phone number, so Dion must go and find him where he lives in supported housing. Dion describes his friend as a 'couple of slices short of a loaf', but he's also 'safe', and Dion has known him a long time.

The building where his friend lives has a reception desk and Dion is told that he can't go in, and that they can't tell Dion whether his friend is in or out. So, Dion leaves a note with his new phone number and a message asking his friend to call him back or to meet him at his 'pitch'.

His 'pitch' is the place where Dion stands to sell copies of the Big Issue magazine. The walk from the dilapidated supported accommodation building and Big Issue distribution office to the centre of the city is marked by a jarring shift in wealth and affluence with each road crossed. Dion's demeanour changes as he transitions from safe anonymity in one, to interloper in another. As soon as he approaches the city centre, Dion becomes animated and witty. He needs to be a cheery vendor working the crowds to entice a sale. He has a ready quip for almost every passer-by, some are stock ("Buy a Big Issue? No? A small one for half the price?") others are off-the-cuff. Dion is an alcoholic but describes himself as a friendly and mellow drunk ("I get funnier throughout the day.").

At his pitch, Dion occupies the space in a different way to the shoppers and businesspeople passing by. Whilst most offer smiles as Dion offers his magazines, or chat on phones and in groups whilst on the move, Dion's world is more permanent. A constant cast of characters who also live on the streets come past. They all know Dion and Dion knows them all. One man comes by struggling with crutches and a cast. Another man, bare-chested despite the cold, and with a constant patter about football clubs, stands and talks at Dion for 10 minutes. A young girl with a hooded jacket tight round her face and carrying a massive backpack trudges up. Dion offers a wave and a smile and explains that she is only recently arrived, homeless and from London ("She needs help now or she'll get stuck."). A street musician whom Dion likes comes over to see how he is doing. Dion offers the spare room in his house to the man (in case his other friend never gets his note), and this prompts a flurry of phone calls to the landlord, but it won't work because the musician does not have the security of a state provided income. And finally, a man and a woman with some news. They know where Dion's phone is. The friend he had lent it to hadn't taken it with him to the police station. Dion can go and collect it from the woman's mother's house later that day. It was a complicated story.

The food van that gave Dion the sandwiches.

All the while Dion breaks up the time with trips away from the busy shopping street (first carefully removing his red Big Issue bib), down side alleys or behind bins for a piss ("The shops often don't let me in"), or to take a drink from a bottle of vodka that he has secreted in one of his deep jacket pockets. At 3 o'clock Dion can also make a trip to a nearby food van where they will give him a free sandwich. He had once gone to them at the end of a long cold day around Christmas and had begged for some food, and they had taken pity. Now it's a regular thing. For

the most part however, Dion does not eat in the day ("It gets in the way of my drinking"), which is strange, he reflects, since he is a fully trained chef.

When he was young, still a teenager, Dion had joined the army as a way of getting out of a rough South London life. He served two tours. He doesn't want to recall everything he did or what it was like, but he is clear that the time left him scarred mentally ("How can anybody see those things and be ok?"). When he left, he was determined to do something different and studied catering at a college in the North of England, during which time he met a woman with whom he had a

child. When she was still young however, he says that out of the blue, he was sent a letter by a lawyer saying that his girlfriend and daughter had left him and never wanted to see him again. It pains him now to recount this, and tears are visible as he says definitively that his life fell apart that day. In retrospect, of course, he had already faced a great many difficulties before then: violence on the streets of London, a children's home, active duty in the army, and of course, drinking had already become a habit. But on that day, he says, he suffered a breakdown. He doesn't remember exactly what happened, but he woke up in hospital a week later, and has taken prescribed medication to pacify and calm his mind ever since.

From then on, he says, he used the skills that the army taught him to survive. He claims to have travelled all over Europe, taking jobs in restaurants or living wild in forests whilst taking odd building jobs. Sure enough, he demonstrates that he is near fluent in Italian and can get by in German. He is proud, he says, that he can live anywhere. He can build shelters, skin animals, make a fire ("Survival. That's what I am good at. As long as I have a mission. And I have one right now!") "What is your mission?" "Survival!". This is not to say that he always made good choices of course. He met another woman, and had another child, but he no longer knows where they are. He spent time in prison after getting caught up in the midst of some deals that went wrong and that had turned violent. And all of the time, he was drinking.

When he came back to England, he reunited with family, from whom he was long 'ex-communicated', and who now lived in the North of England. But the relationships broke down acrimoniously, and he was soon on the streets again. He says that he has since slept in every doorway, carpark and alley that homeless people sleep in, along with finding beds in "every proverbial shithole that some people call 'housing'". That's how he knows everybody on the streets.

But he is beginning to feel his age. His body is slowing down. In fact, his body is *breaking* down. He missed his last doctor's appointment that was arranged for him at the Homeless People's Health Xchange, but he knows there is something seriously wrong. He has lost strength in one of his arms, and he shakes involuntarily. He rejects help though insisting that he has the skills to look after himself, and besides, he says, he can't handle structure. "You mean like AA? No way. I don't like that. Meetings. God. And anyway, I don't want to stop." "Veterans stuff? Yeah, they have offered me help now and then. But there's too many rules. I don't need that. I know how to survive." "Even the Big Issue is a bit like that. So many rules. But at least I can make some money."

Today, he says, is "like Groundhog Day ... but not in a bad way. I get up, have my

'breakfast' [beer], maybe go and get some Big Issues if I have run out. Make some money – I can survive on a tenner – then go to Tesco, buy some food, my vodka – it calms my mind – and something for 'breakfast' – then start it all again." The vodka, he says, calms his mind enough to leave the house: "Without it, I wouldn't leave. The medication makes me confused and forget things. But the vodka gets me out of the house, and I need to get out to get the money." He also tops up with his income from ESA, which he has recently used to buy a computer. The landlord has also agreed to provide internet in the house. And this is important, because with his contacts back and an internet connection, he can get back in contact with his mother. His mother lives separately from the rest of his family, but also far away from Birmingham. She is old, and confused, he says, and probably doesn't have long to live. But he wants to speak to her still, until she dies.

As he leaves, Dion reminds me "I'm sorted now. I have a good landlord. A house. I am getting the internet. I can survive." He has been in this new situation for ten days.

5. What Matters

Whilst the ethnographic study highlights the uniqueness of the life journey, experiences and choices of each of the individuals experiencing MCN, focus group discussions with those with lived experience as well as front-line practitioners helped us develop an understanding of the feelings and perceptions that are frequently reported or may be common to the most vulnerable people in the city. Below is a summary of what, in general, matters most to people with MCN, particularly when it comes to accessing support.

5a. What people with multiple complex needs think

*"The easiest thing to give in my opinion is love and care, but it's the hardest thing that they find."
(Anawim service user about statutory sector provision)*

"If we could see people when they are younger and help them and explain things to them because we have been through it and we have got understanding, I think they might not get to where we are now. They might be helped before they get to this age."

"I will pick the phone up to ring to put a complaint in about housing or mental health or even just to access some help with it. And they just read a script, there is no humanity there anymore."

"In the mental health now, a few do care. But the majority of them, it's just, onto the next one, onto the next one. No understanding, no compassion, none of it."

"Yeah so every time it's been a huge amount of time. But it's priceless. It's 24-26 weeks whereas I think now, the way they treat you, you get six weeks mate. If you're lucky I will give you an extra three. If you're lucky, you know what I mean? And you better be fixed by then, get back to work."

To develop a good understanding of what really matters to individuals experiencing MCN to be able to transform their lives and what the common drivers for the inequality they face are, we talked to them through a series of focus groups. Here is what they value most when it comes to contact with services:

- Understanding, compassion and humanity from professionals responding to requests for help or providing support;
- "Personal touch" when providing support, such as a follow up letter or telephone call;
- Opportunity to build trust and relationships with key workers to be able to fully engage with treatment and therapy without the fear of the possibility of being abandoned or let down later;
- Tenacity of professionals who will persistently encourage engagement with services and offer support all the way through;
- Being seen or provided support immediately or shortly after a referral, so that the window of opportunity is not missed, and the daily chaos does not hinder the chance to transform their lives;
- Prevention and early intervention, starting from early childhood when neglect, abandonment and abuse are first being experienced;
- Same easy access to support regardless of age, gender, disability or family circumstances (i.e. marital status and dependents);
- Knowledge of where to find appropriate services and support;
- Continuity of key worker;
- Time to recover before support is abruptly ended when it reaches the maximum target time;
- Peer support throughout the journey.

5b. What professionals think

There is a strong perception amongst the professionals that the escalation of complex needs is associated with limited, insufficient or no access to welfare support. We chose to interview a group of job centre front-line staff from across Birmingham who, according to the latest state of welfare reports produced by the Department for Work and Pensions (DWP), routinely come into contact and support individuals with MCN, many of whom are single and without dependents with them.

“We get a lot of homeless people, people which are in supported accommodation. Majority of those tend to be ex-offenders, things like that. So, if there are single people with children then they are usually not with the parents that we see.”

Here are the things that the practitioners stated they believed were of the greatest importance for their clients:

- Stable and safe environment (i.e. being away from the relatives and networks who had a negative impact on their lives, or caused harm);
- Stable and suitable accommodation (e.g. appropriate support, guidance, presence of support workers in supported accommodation);
- Presence of role models or mentors who genuinely have the best interest of the person with MCN at heart;
- Front-line staff being appropriately trained to be able to provide support more effectively;
- Trust to encourage engagement with the service followed by the service being able to provide the help required for the duration that is needed in order to secure the long term best possible outcome;
- Planned upstream provision for those at risk of having MCN or their escalation, e.g. planned prison releases into appropriate accommodation and/ or treatment;
- Communication and robust handovers between services and organisations for wraparound seamless support;
- Multi-agency working and co-location of services for easy access and timely provision.

"That is the critical issue. The type of housing. If they are in a more stable environment a lot of this wouldn't be able to happen. They would be safer and less exposed to the wrong kind of people."

"You'll find a lot of these landlords take up these properties just so they can take the vulnerable people in and go mishap with them" (about unregulated supported accommodation).

"We keep using the word supported accommodation, but it is only supported financially, there is no such thing as workers and guidance."

"In an ideal world, they should be some sort of plan where we are moving you to this cos you've just come out of prison or you were homeless, this is our plan with you over the next 6 months. We are going to do this in a phased way and if you meet these criteria we are going to do (next phase), there is none of that. So, you're asking people to fix multiple aspects of their life in one go. It is too much for anyone, no one can do that."

"It's important that we have more access to each other's services at the right level, so we know where one finishes and the next one starts."

6. What Works

A photograph of a person sitting on the floor with a notebook and pen, with another person sitting behind them, all under a purple tint.

Successful interventions save the public purse significant sums:

“The research identified three broad categories of experience in women with multiple needs using the women’s centres³², with varying levels of support need. The model shows that a successful intervention, costing between £1,151 and £2,302 per woman per year can save the public purse between £47,000 and £264,000 per woman over five years, depending upon the level of support needed” (Revolving Doors Agency, 2011).

Below is a compilation of best practice when working with people with complex needs based on available research literature and evaluation of local, national and international initiatives.

The National Institute for Health and Care Excellence (NICE) recommends that people with mental illness and substance misuse problems should not be excluded from secondary mental health services because of their substance misuse, and should have a coordinator to support with social care, housing, physical and mental health needs, as well as their substance misuse problems³³. In addition, there is a need for effective identification, assessment, coordination and delivery of care for all people with a mental health problem in contact with the criminal justice system, including those on probation³⁴.

The Advisory Council on the Misuse of Drugs³⁵ provided advice to the government on the factors that make the homeless population vulnerable to substance misuse harms and how these risks can be reduced. It recommended that:

1. Housing policies, strategies and plans should specifically address the needs of people who use drugs and are experiencing homelessness.
2. Services at a local level must be tailored to meet the specific needs of substance users who are currently experiencing, or have recently experienced, homelessness. and need to consider people who are experiencing multiple and complex needs.
3. Substance use, mental health and homelessness services should use evidence-based approaches such as integrated and targeted services, outreach, and peer mentors to engage and retain homeless people in proven treatments, such as the opiate substitution treatment.

The guidelines above are incorporated into the Birmingham Homelessness Prevention Strategy and the commissioning strategies for substance misuse. Dual

35 Advisory Council on the Misuse of Drugs (2019), Drug-related Harms in Homeless Populations.

diagnosis services have also been established, but there are still challenges to be addressed in order to ensure their full capability.

Research generated by the third sector organisations working with people with MCN focuses more on their individual experiences, best approaches to their recovery and transforming their complex lives. It sets out 10 principles for effective services³⁶. They also reflect findings from many evaluations of national and local schemes, such as Anawim and Changing Futures Together.

Here are the 10 principles³⁷ for effective MCN services:

- 1. 'Someone on your side':** Opportunity to build consistent, positive and trusting relationships.
- 2. Assertive and persistent approach** to engagement that does not give up on people. Continuous and consistent support over a prolonged period, responding positively and constructively to setbacks.
- 3. Tailored support:** A personalised approach which addresses the full gambit of an individual's needs and is psychologically and culturally sensitive to particular needs of specific groups including women, people of black and minority ethnic backgrounds and young adults.
- 4. Building on strengths:** Supporting the client to recognise and develop their personal strengths, recognising more than a 'bundle of needs and problems'.
- 5. Coordinated and seamless support** that understands and links with other services, pulls services together around the client, helps clients to access and navigate support through brokerage and advocacy. It ensures continuous support across key transitions, avoiding gaps in care.
- 6. Flexible and responsive approach** to support and an ability to react quickly in a crisis.
- 7. 'No wrong door':** If a service cannot provide support, they take responsibility for connecting the client with someone who can.
- 8. Trauma informed environment:** Services understand the emotional and behavioural impact of traumatic childhood and life experiences on clients and vicarious trauma on staff, avoid re-traumatisation, facilitate reflective practice, build resilience and support recovery.
- 9. Co-production:** Support designed in partnership with service users.
- 10. Strategic support:** There is a buy-in of senior, strategic stakeholders and services are adequately resourced.

³⁶ These principles are based on a combination of desistance and recovery theory as well as Revolving Doors Agency research: Comprehensive Services for Complex Needs: A summary of the evidence, Adding Value? Reflections on payment by results for people with multiple complex needs.

³⁷ <http://www.russellwebster.com/10-principles-for-working-with-people-with-complex-needs/>

Research on multiple complex needs is wide in scope and much of the published evidence comes from evaluations of specific interventions, or research around the benefits of prevention and early intervention. There are several approaches and models, which, through evaluation and review, seem to be showing positive results³⁸.

Prevention and early intervention

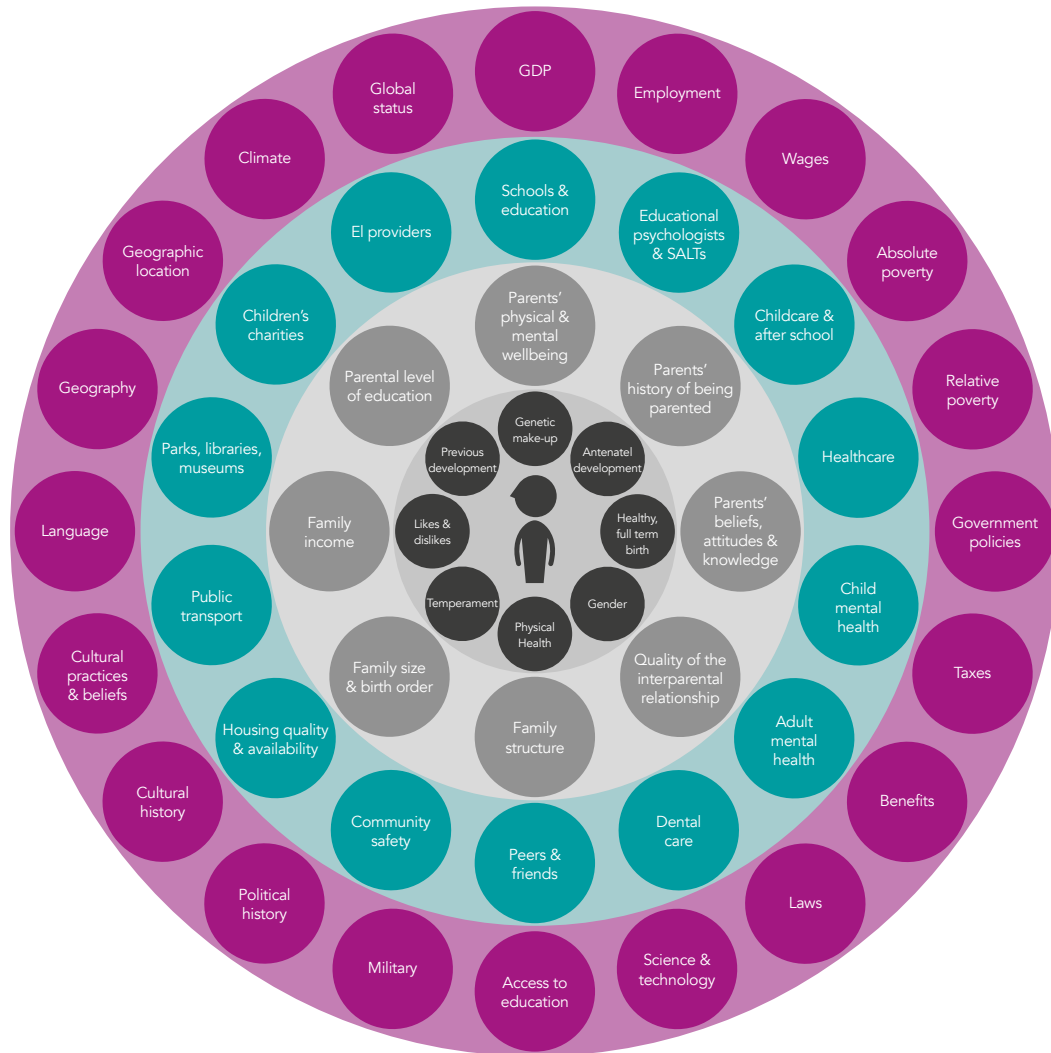

“Why should you have to get to the rock bottom before someone comes in? if they catch you then, then you won’t hit there.”
Focus group participant

“Effective early intervention works to prevent problems occurring, or to tackle them head-on when they do, before problems get worse. It also helps to foster a whole set of personal strengths and skills that prepare a child for adult life. We have a good understanding of the risk actors that can threaten children’s development, limit future social and economic opportunities, and increase the likelihood of mental and physical health problems, criminal involvement, substance misuse, or exploitation or abuse in later life.” (Early Intervention Foundation)

38 Revolving Doors Agency (2015), Comprehensive services for complex needs: assessing the evidence for three approaches.

Figure 8: Factors impacting on child's life

Source: Early Intervention Foundation

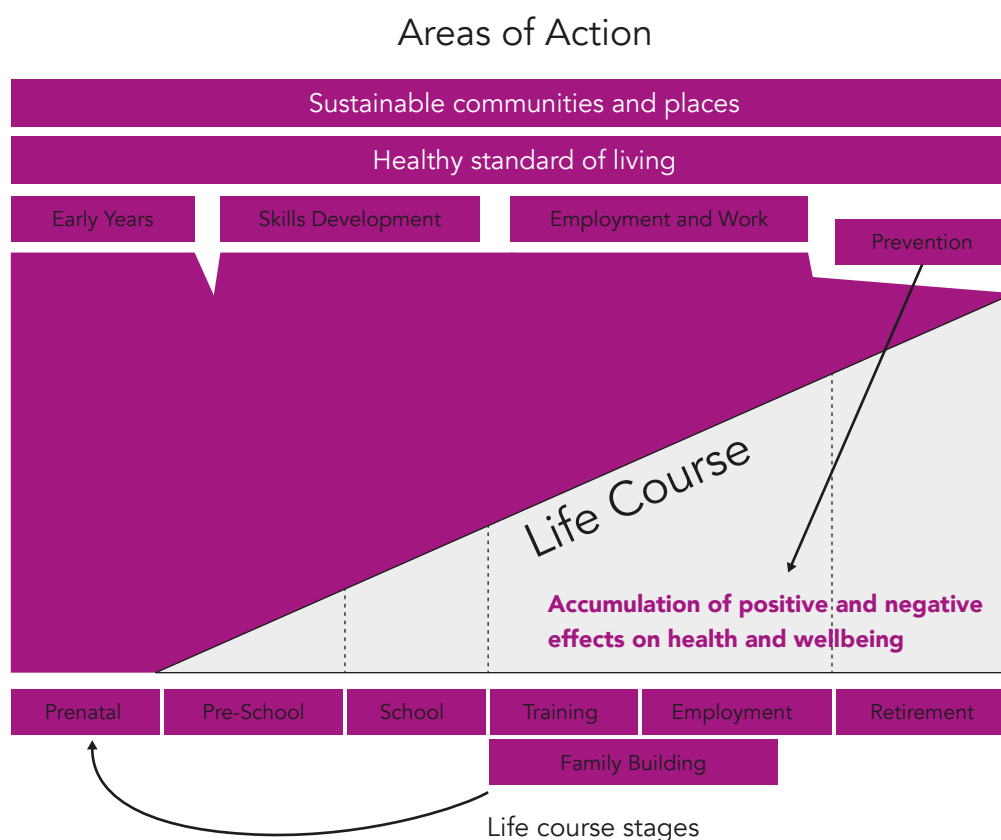

Source: Early Intervention Foundation

Adverse childhood experiences (ACEs) are an indicator of the child, if they are not helped, being at risk of developing multiple complex needs later in life. These risk factors cannot tell us exactly which child or young person will need help, but they can help us identify children who are vulnerable and who may need extra support. Studies show that early intervention works best when it is made available based on pre-identified risks. This links with Prof. Michael Marmot's Life Course approach to tackling health inequalities through prevention.

Figure 9: Action across the life course model

Source: Fair Society, Healthy Lives. The Marmot Review 2010

Social isolation is also one of the risk factors that may lead to the escalation of need and developing MCN. The new Marmot Review highlights the huge impact it has on people declining. In some cases, reduction of social isolation could prevent complex needs.

Not all complex needs can be prevented, but there are interventions and approaches that can be put in place to prevent their escalation and crisis. Those, for example, include:

- **Multisystemic Therapy**³⁹ - an intensive psychological treatment programme which takes place in the family home. Therapists work closely with young people and their families to address the different areas which influence behaviour.
- **Wraparound support**⁴⁰ - a process of co-ordinating professional and

³⁹ Revolving Doors Agency (2015), Comprehensive Services for Complex Needs: A summary of evidence.

⁴⁰ Revolving Doors Agency (2015), Comprehensive Services for Complex Needs: A summary of evidence.

community-based support for young people, underpinned by a focus on family strengths and the 'voice and choice' of young people and their families.

- **Comprehensive leaving care plans and interventions** for young people, including life skills training and preparedness for independent living and adulthood, starting well in advance of leaving care. One of many such interventions is the House Project⁴¹, but there are other opportunities much earlier on in the child's journey through care.
- **Support for veterans** experiencing complex needs, such as substance misuse, post-traumatic stress, family breakdown, right from the start of leaving service or medical care through fast-tracking into appropriate local support.
- **Planned prison releases** where a **coordinated plan and care** are established and available from the moment of release. For example, the Through the Gate Resettlement Service being provided by the probation service theoretically is such intervention, but we know from evaluations that not all service objectives are being met consistently across the country⁴². An improved model is being introduced by the Community Rehabilitation Company operating in Birmingham.
- **Planned hospital discharge** where a coordinated plan and care are in place and available from the moment of discharge. Birmingham's Adult Social Care commissioners are exploring a partnership pilot which includes a multi-disciplinary team delivering the service within the University Hospitals Birmingham (UHB), and there is a plan to replicate it within the Sandwell and West Birmingham NHS Trust in an attempt to ensure that nobody is discharged into homelessness.

Recovery and transformation

Many people with MCN struggle to recover and transform their lives through support from mainstream services. They may be excluded for disruptive behaviour or they do not meet the rigid and complicated thresholds for access. This means they often disengage and come into contact with the system at crisis point, and so repeatedly attend A&E or end up in custody. Many are repeatedly imprisoned for short periods of time; many are unable to sustain stable housing and end up homeless. Families with complex needs and a chaotic environment often have their children taken into care.

Here is a list of the interventions that have proved to be effective when it comes to

41 <https://thehouseproject.org/>

42 <https://www.justiceinspectorates.gov.uk/cji/wp-content/uploads/sites/2/2016/09/Through-the-Gate.pdf>

recovery and transformation:

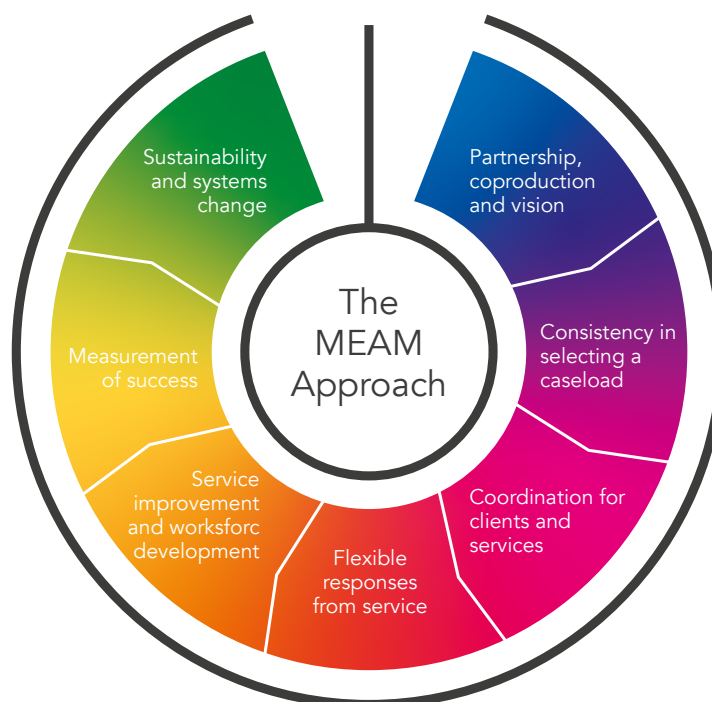

- **Lead or Link Workers and Service Navigators:** The model aims to provide support from a worker who helps people who are not receiving the support they need, through linking them in with services, providing advocacy and emotional support, providing consistency and stability. The evidence base is limited and largely from consultancy evaluations such as Fulfilling Lives and Revolving Doors and is for the most part qualitative. However, evaluations show promising results in terms of outcomes for service users such as reductions in hospital admissions and criminal behaviour.
- **Peer mentoring** is a form of mentorship between a person who has lived through a specific experience and a person who is relatively new to that experience. Peer mentors can be role models to show that change is possible. The peer mentor role also provides positive development and opportunity for the mentors themselves. Evidence behind the effectiveness of peer mentoring specifically for MCN is still emerging. This type of model has a Randomised Controlled Trial (RCT) evidence base in other support areas such as HIV, substance misuse and parenting. However, local evaluations show the value of this type of support in transforming people's lives and securing longer term outcomes.
- **Psychologically informed / trauma informed environments** are services where the day-to-day running has been designed around psychological theory or grounded in complete understanding of the effects of trauma exposure, considering the psychological and emotional needs of people with vulnerabilities and trauma history. There is an absence of RCT evidence, though findings from the Liverpool Waves of Hope service indicate that their psychologically informed accommodation service had a much higher rate of successful move-on (93%) compared to general accommodation services.⁴³
- **Housing First** is designed to help people who need a home, but also need extra help to address their complex needs. The model is intended to provide suitable housing solutions quickly to those in need and, crucially, is not conditional on abstinence from alcohol or drugs. There are established Housing First projects in North America and Scandinavia, but the model is relatively new in the UK and has been promoted by the Government through the national Rough Sleeping Strategy 2018. This approach has been quite successful abroad and there are several evaluations available to support this. The evidence in the UK is still limited, however, it is being reported that people in the Housing First intervention groups experience significantly fewer episodes of hospitalisation and shorter hospital stays, and are more likely to remain housed at 18-24 months compared to the rest of the population experiencing rough sleeping.

43 Liverpool Waves of Hope (2017), Accommodation Based Service: Lessons from a Psychologically Informed Approach.

- Coordination and integration:** The Making Every Adult Matter (MEAM) helps local areas design and deliver better coordinated services for people experiencing multiple disadvantage. The MEAM coalition supported three pilots in Cambridgeshire, Derby and Somerset in 2011 to coordinate and integrate the delivery of existing local services for people facing MCN and exclusions. Each pilot area employed a coordinator to engage with clients and ensure the best possible route through services, for example by helping clients to gain access to housing, treatment for substance misuse or mental health assessments in a timely manner that best works for the client to sustain their recovery. The findings 44 showed statistically significant improvements in wellbeing for nearly all clients across all quantitative measures⁴⁵. Some of the associated costs to local services decreased in the first year of the pilot. Cambridgeshire saw a 31% reduction in crime costs. Other services experienced a temporary surge in usage as access to them had been enabled through the coordinators. The MEAM approach is currently being used by partnerships of statutory and voluntary agencies in 27 local areas in England. MEAM areas consider seven principles, which they adapt to local needs and circumstances.

Figure 10: Seven principles of MEAM

Source: meam.org.uk

44 Battrick, Hilbery, Holloway (2013), Findings from the Making Every Adult Matter (MEAM) service pilots: a summary paper. *Advances in Dual Diagnosis*. May 2013 17;6(2):66-75.

45 The quantitative measures include the New Directions Team (NDT) Assessment, the Warwick-Edinburgh Mental Well-Being Scale and the Homelessness Outcomes Star.

- **Bespoke person-centred solutions:** Fulfilling Lives is a national £112 million investment over 8 years via the Big Lottery Community Fund supporting people who are experiencing some of the most entrenched complex needs. It funds voluntary sector-led partnerships in 12 areas of England, of which Birmingham’s Changing Futures is one. They are working to provide person-centered and coordinated services for people with MCN, engaging individuals who are not currently engaged with services and are routinely excluded from other support. An independent evaluation of 12 of the Fulfilling Lives partnerships carried out by CFE Research and the University of Sheffield showed that up until the end of September 2017, almost 3,000 people had used the programme of which a large number were found to have at least three of the four needs (95%) and just over half (51%) had all four. Individuals who remained engaged with the programme for approximately two years showed a clear reduction in risk and need, though people with the most complex needs may require extended periods of engagement with services (12 months or more) in order to build trust⁴⁶.
- **A stepped approach to addressing complex needs** which locally has been used by Anawim, has proved to be effective when addressing MCN of women. It is based on the Maslow’s theory of the Hierarchy of Needs⁴⁷ and demonstrates how safe and secure accommodation facilitates the process of engagement with services and that it is crucial before a woman is able to address her health and social needs⁴⁸. We also know that being able to make own choices and being in control of our lives has a positive impact on recovery, so access to accommodation in itself may not lead to addressing MCN, but access to suitable accommodation of **choice** may be more helpful.

7. What's On Offer

7a. Local strategies and approaches

Below is a list of key local strategies and approaches developed to address specific complex needs of the most vulnerable residents of Birmingham. Those stem from, are linked to or complement the sub-regional and regional work being undertaken by:

- The West Midlands Combined Authority's Homelessness Taskforce
- The West Midlands Combined Authority's Public Sector Reform Board
- The Birmingham and Solihull Sustainability and Transformation Partnership
- The Black Country and West Birmingham Sustainability and Transformation Partnership and other.

Birmingham Homelessness Prevention Strategy 2017+

This multi-sector cross-agency strategy focuses on preventing people from becoming homeless in the first place and supporting those who are homeless to build a more positive future in good health, sustainable accommodation and long-lasting employment. It aims to do so by implementing a robust pathway from prevention, through early intervention to recovery.

Figure 12: The Positive Pathway

Source: Birmingham Homelessness Prevention Strategy 2017+

Birmingham Domestic Abuse Prevention Strategy 2018-2023

In 2017 domestic abuse was the second highest reason for homelessness in Birmingham. Whilst 90% of victims who applied for housing as homeless were accepted, only 32% of women and children seeking refuge in an emergency were able to access accommodation. The impact of domestic abuse on the mental health of victims, including children, is severe. Dealing emotionally with the abuse and trauma they have experienced often results in depression, anxiety and post-traumatic stress disorders. Women experiencing significant domestic abuse are more than twice as likely to have an alcohol problem and eight times more likely to be drug dependent than others. Children being exposed to or witnessing domestic abuse experience it, too. So, they too need appropriate support to prevent them developing MCN in the future.

For perpetrators of domestic abuse that are held accountable through the justice system, the resulting impacts can be of the breakdown of family connections and diminishing of wider community networks as well as the ending of relationships and loss of a place to live in. These in combination can result in a spiralling complexity of health, financial and social decline and disadvantage; leading to multiple complex needs, i.e. poor mental and physical health, having no fixed abode, rough sleeping.

Therefore, the Birmingham Domestic Abuse Prevention Strategy focuses on adults (predominantly women), children and young people experiencing domestic abuse, children that are exposed to or witness domestic abuse as well as domestic abuse perpetrators. It outlines a layered prevention model and three key priorities.

Figure 13: Domestic Abuse Prevention Model

Source: Birmingham Domestic Abuse Prevention Strategy 2018-2023

Birmingham Armed Forces Community Covenant

In Birmingham there are an estimated 93,000⁴⁹ veterans, many of whom are at risk or experiencing MCN, including mental health issues which are often associated with service-related trauma and may lead to substance misuse and homelessness.

The Council and many partner organisations are signatories to the Armed Forces Community Covenant, which sets out a commitment to support veterans and presents an opportunity to specifically focus on complex issues affecting their lives.

It is important to note that very few ex armed forces personnel in Birmingham are amongst the known service users with MCN. Also, service user experience suggests that many of the existing support agencies for veterans struggle to deal with MCN and the support available focuses mainly on immediate discharge from service.

Creating a Mentally Healthy City

The Birmingham Health and Wellbeing Board created a sub-forum that focuses specifically on mental health and wellbeing. The forum is a partnership of strategic stakeholders who are committed to making Birmingham a mentally healthy city.

There is ongoing work to improve access to mental health services for the most vulnerable and disadvantaged groups through the Joint Strategic Needs Assessment (JSNA) work and our recent Suicide Prevention Strategy as well as emerging work towards addressing health inequalities through the health and wellbeing board's Creating a City without Inequalities Forum.

There is a commitment to develop a comprehensive public health approach to measure our achievement in reaching disadvantaged and vulnerable people and effectiveness of our work with these communities, which include Black and Minority Ethnic groups, migrant groups, people who identify as Lesbian, Gay, Bisexual or Transgender (LGBT) and people that are homeless.

Birmingham Suicide Prevention Strategy 2019-2024

The Birmingham Suicide Prevention Strategy sets out priorities for action and a shared ambition for the city to reduce deaths through suicide as part of our wider ambition to become a mentally healthy city.

49 2011 Census estimate (ONS).

Individuals experiencing MCN are at a higher risk of suicide. Preventing or tackling MCN leads to preventing suicide deaths.

**MARITAL
BREAK DOWN**

12.5% of adults are living in single person households (2011)

**CRIME &
VIOLENCE**

6.4 young people (10-18yrs) per 1,000 in the youth justice system

24.2 domestic abuse-related crimes and incidents per 1,000 adults recorded by the police (2017/18)

**LOW HAPPINESS
SCORE**

8.8% of adults have a low happiness score

4.2% report a low level of life satisfaction

19.0% report a high anxiety score (2017/18)

**SEVERE MENTAL
ILLNESS**

1.19% of GP patients have a severe mental health illness (2017/18)

HOMELESSNESS

4.7 households per 1,000 households in Birmingham are in temporary accommodation (17/18)

**MARITAL
BREAK DOWN**

10.7% of adults are divorced or separated (2011)

7b. Local services

There is a wide range of services, statutory and non-statutory, available in Birmingham for those experiencing complex needs. Most of them focus on intervention and recovery through a series of carefully designed criteria and pathways.

This report highlights the main provision and acknowledges that the list is not exhaustive.

Prevention and early intervention

There are several universal and early intervention services being commissioned by Birmingham Public Health and the Children's Trust that aim to prevent and tackle the early indicators of complex needs in children and young people. The key services are:

- Health visiting and early years provision
- School health and wellbeing service
- Early help and family support.

Birmingham's **Think Family Strategy**⁵⁰ complements and provides a response to families with additional needs captured within the **Right Help, Right Time** framework and the **Strategy for Early Help in Birmingham 2019-2022**⁵¹ adopted by the Birmingham Safeguarding Children Partnership.

The family support service trained a number of staff in the **Adverse Childhood Experiences (ACE) recovery toolkit** and the Children's Trust now deliver the toolkit citywide to parents and children. The Trust are also looking to implement trauma-Informed approaches and are exploring what this may look like operationally in line with their **Relationship-based practice** model.

There are other services in the city (e.g. Birmingham and Solihull Mental Health Foundation NHS Trust, Women's Aid) that already use such approaches which may also be known as **Psychologically Informed Environment** (PIE) models. Others (e.g. Housing) are working towards their implementation.

51 <http://www.lscpbirmingham.org.uk/early-help>

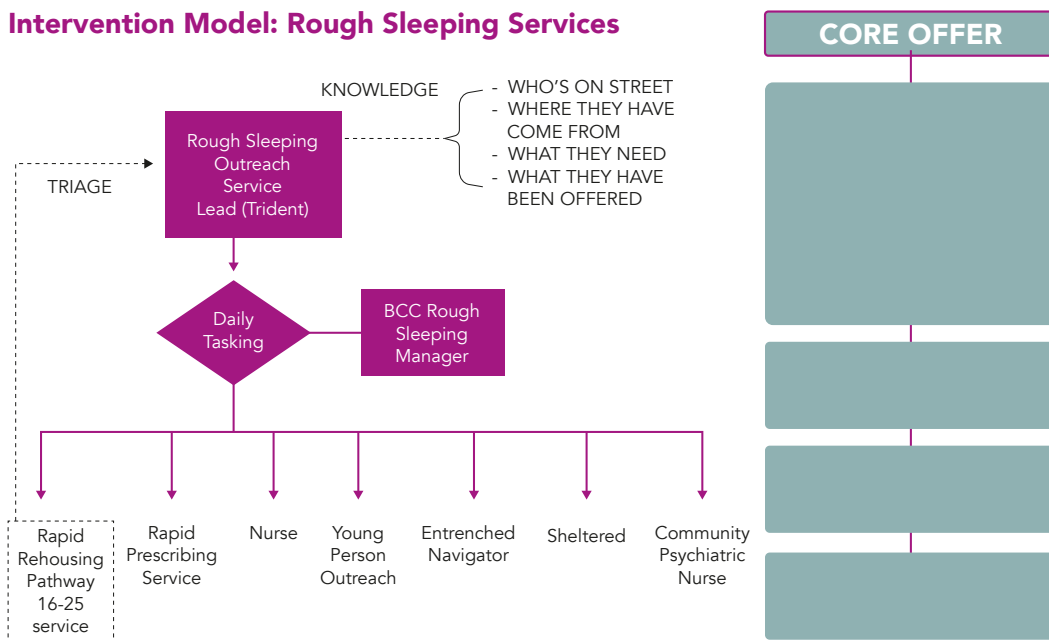

Homelessness

Birmingham City Council commissions a variety of services for rough sleepers as part of its new **Street Intervention** model which, since recently, is coordinated by the Trident Reach outreach service.

Figure 14: Street Outreach Service Model

Source: Birmingham City Council

Intervention Model: Rough Sleeping Services

**Referral
Routes:
Hubs**

**Referral
Routes:
Lead Worker**

The partner organisations meet regularly and decide on user centred approaches that can include single and joint contact, depending on level and complexity of presenting need. **The Housing First** service accepts referrals from the Street Intervention service and provides a named system navigator for those who require more intense support and are known to be rough sleepers or at risk of becoming

a rough sleeper. Housing First initiative has been funded since 2018 via a £9.6 million central government's grant and represents a new in the UK approach to addressing homelessness with Birmingham being one of the first cities in the West Midlands to trial this service over 3 years. It relies on joint working between the council, housing associations, private rented sector and a variety of support groups to help rough sleepers to break the cycle of decline and multiple deprivation that has led them to living on the streets. It starts by putting homeless people into a home before building a support network around them. Housing First provides wraparound support for the multiple needs of the persons referred and this support continues even if they are rehoused.

In terms of the substance misuse offer, the interface with CGL supports persons who are rough sleeping, those in homeless hostels as well as their ongoing community-based treatment, should they find accommodation. Working in partnership with the BVSC, CGL also offer rapid on street opiate substitute prescribing as part of the national Rough Sleeping Initiative⁵².

Health Xchange is Birmingham and Solihull Mental Health Foundation Trust's primary care service specifically for the homeless population. They offer a full general practice service to those who are homeless or vulnerably housed aged 16 and over and not pregnant. As well as GP access, nurse prescribing drop-ins and nurse clinics are provided offering a range of services, i.e. sexual health, screening, chronic illness support, blood and HIV testing. A counselling service is also provided by community psychiatric nurses who triage a person's mental health problems and will refer to secondary services where appropriate.

Mental health

The Birmingham and Solihull Mental Health Foundation Trust (BSMHFT) provides a range of community based, day, inpatient and specialist mental health services.

The **Community Mental Health Team** provide a statutory mental health NHS service in Birmingham and Solihull for people who are homeless and experiencing mental health problems. The service includes assessment and treatment of mental health problems, management of complex psychological and social needs, risk assessment, community nursing support, physical health monitoring, social assessment, access to vocational training and occupational activity and resettlement advice. It is a city-wide service and see people with mental health problems that are sleeping rough, living in squats, hostels or otherwise homeless. This includes patients that are not registered with a GP.

⁵² <https://www.gov.uk/government/news/boost-to-successful-government-rough-sleeping-programme>

In January 2020, a new **Street Psychology** service was commissioned for five years to explicitly support homeless persons sleeping rough who experience mental health issues. They undertake street-based assessments and link rough sleepers with appropriate services, and in any instance where the persons are housed, there is a handover to the Community Mental Health Team to ensure continuity of care.

The **NHS Veterans' Mental Health Complex Treatment Service** (VMH CTS) is a specialist community mental health service for armed forces veterans. It is for those experiencing complex mental illness related to their time in the military and to help veterans regardless of when they left the armed forces.

BSMHFT also provides low and medium secure mental health services for adults, as well as forensic services for children and young people, addictions services and dual diagnosis.

Substance Misuse

Change Grow Live (CGL) supports all persons with substance misuse issues over the age of 18 through a variety of services.

CGL's core approach to working alongside vulnerable people includes delivering treatment and recovery actions that integrate with the city's wider multi-agency approach to tackling substance misuse and commonly associated conditions, such as homelessness and mental health.

The **CGL homeless offer** was rated as an outstanding area of practice by the Care Quality Commission in April 2019 and is delivered in partnership with the Street Intervention Model and incorporates the agreed protocol for the mental health co-provision, as detailed below.

In terms of offenders, CGL work to the requirements of the Probation National Standards in order to provide **drug rehabilitation** and **alcohol treatment** requirements where these are set out as terms of probation. Such work is undertaken in partnership with probation service providers and the Integrated Offender Management system to identify and work with offenders including those categorised as PPOs (prolific and priority offenders).

Dual diagnosis approach

CGL has an agreed protocol with Birmingham Solihull Mental Health Trust that details the treatment pathway for those with co-existing mental health and substance misuse problems. When a referral received fits the pathway criteria

then a joint assessment should be completed within one week, and a care plan co-produced with input from the service user that includes details of all relevant partner agencies.

Offending

In addition to the interfaces laid out above as well as other provision available through the **Vulnerable Adults Housing and Wellbeing Support**, there is number of hubs across the city, including one specifically focused on ex-offenders. The other hubs are focused on young people aged between 18 and 24, single adults, childless couples and victims of domestic abuse.

The work of all these hubs is likely to bring them into contact and provide services to persons with MCN. They concentrate on coordinating and networking services in a person-centred manner by providing a named lead worker to facilitate such multi-agency working for a period of two years. This is especially relevant in terms of ex-offenders with MCN, as they can have up to five appointments in the first day of being released from prison with the aim to avoid re-incarceration, aid reintegration into society, and speed up recovery.

Voluntary sector

BVSC: Birmingham Changing Futures Together is one of twelve Fulfilling Lives sites across the country supporting people with MCN. The National Lottery Community Fund has invested £9,950,000 in this Birmingham project, which started in June 2014.

At the heart of the project is a strong focus on working in partnership with “experts by experience”. The project aims to improve the collaboration and integration of agencies to improve the service user journey, striving to ensure:

- Seamless and integrated services through better signposting and referral pathways
- Earlier identification and diagnosis of complex needs to ensure a response is triggered sooner
- Tracking and monitoring of progress and outcomes
- Data sharing between providers so that service users are not repeatedly required to “tell their story”
- Intensive and more ‘guided’ support for service users
- Support and guidance to partner agencies
- Co-production with service users in service design and system change.

It has several workstreams ranging from a *Virtual Hub* that provides information, data and expertise to the programme and specific streams of work:

- **Lead Workers and Peer Mentors** helping people with MCN to navigate services to access appropriate recovery and support,
- **No Wrong Door** ensuring collaborative working through a network of organisations, so that individuals can easily access help
- **Every Step of the Way** – a co-design initiative ensuring service users are involved and integral towards developing and monitoring the programme
- **Intelligent Common Assessment Tool (iCAT)** – a system which enables sharing information and records between agencies
- **Improved Outreach/ In-reach and Beyond the Basics** support towards connections with friendship groups for building resilience and sustaining recovery, and ultimately breaking the cycle of intense service use.

The programme promotes practice and training that is guided by the Psychologically Informed Environments approach.

Anawim, based in Birmingham, provides a holistic service through caseworker and criminal justice solutions to women with MCN aged over 18 and their children, and anyone that identifies as a woman resident in Birmingham. Their work aims to:

- Increase self-worth and keep families together (where appropriate)
- Empower each woman and child towards independence, regular employment and dignity
- Raise each woman's self-awareness, trust and responsibility towards herself, her children and the wider community
- Ensure the wider community are better informed about issues affecting this client group.

Anawim work with other agencies specifically supporting those vulnerable to exploitation including prostitution and substance misuse. They support women who may have offended and those vulnerable to crime as well as victims of domestic violence. They offer intervention, support, rehabilitation, prison in-reach, drop-ins and outreach in the community, including to homeless women and street workers.

Shelter is a national charity that helps people struggling with inappropriate housing or homelessness through advice, support and legal services. They offer face to face and online advice, legal support and a national helpline.

SIFA Fireside is a charity enabling homeless and vulnerable people to take control towards achieving healthier, fulfilling lives. They work to provide inclusion,

engagement and equal access to services for people that are disadvantaged or experiencing homelessness, aiming to reduce homelessness and offending, increase social inclusion and life skills, improving health and employment potential.

Partnership agencies work alongside SIFA to provide health and wellbeing services to clients. The access point for all services is their Drop-in Centre. They also deliver the Adult Support Hub aimed at early intervention for individuals with multiple needs living in precarious housing.

St. Basil's works with young people to enable them to find and keep a home, grow their confidence, develop skills, increase opportunities and prevent homelessness.

They aim to:

- Meet the needs and raise the aspirations of young people through provision of good quality accommodation
- Support services to meet the diverse needs of young people and prevent homelessness
- Ensure young people are involved in setting standards, identifying priorities and monitoring services
- Challenge discrimination and promote diversity and cohesion through employment, service delivery and community engagement.

Birmingham Mind is part of a national mental health charity providing services in and beyond Birmingham's boundaries, increasing service provision to those most affected by poor mental health as well as increasing preventative and community-based services.

Other services and initiatives

The PURE (Placing Vulnerable Urban Residents into Employment) project

is part-funded by the European Social Fund and delivered by Birmingham City Council's Adult Social Care. It brings together a range of coordinated interventions which assist citizens with complex needs experiencing barriers with access to employment. The project participants gain an intensive level of support to address their needs to be able to access either employment or training.

The Preventing Crisis Project is an initiative developed and delivered by Birmingham City Council and voluntary sector partners, including ASIRT, Refugee and Migrant Centre and Central England Law Centre. It works with organisations supporting individuals with MCN, such as Women's Aid and SIFA to provide them with legal, immigration and welfare advice.

8. Gaps And Barriers

8a. Lived experience perspective

"I just think if I knocked on the door of services and I just said I had two kids and a disability I would get more."

(Focus group participant with MCN)

The research that was conducted to underpin this report through a series of focus groups and a rapid ethnography suggests that **not having dependents poses a significant barrier** to accessing the right services at the right time. Not having dependents and **being in a relationship** can further hinder the opportunity to receive support.

Through past experiences, many individuals with complex needs are unable to manage relationships whether at a family, personal level or with professionals. This affects engagement as well as coping mechanisms. The peer mentors from one of the focus groups reported that most people they see are single, though a small minority are in unhealthy relationships, and confirmed that it is easier for the single people to get support.

"I think it's actually easier for a single person to get help. Because they are only focusing on themselves. We see it so often, people... if you looked at like growing up, they are just looking for a fix. They are just looking for somebody to validate them."

Substance misuse was discussed a major complicating factor in accessing services such as mental health assessments or accommodation.

"So, it's like a vicious cycle, it's like trying to get accommodation but you also need to get quick to get them straight into other services to get them on scripts, to get their mental health looked at. They can't, you can't, treat mental health when there is substance misuse happening."

In addition, **substance misuse treatment was considered too limited** in terms of capacity and a scope of substances, with perceived absence of a pathway for new psychoactive substances which are a big problem.

Most experiences that were shared with us were around how difficult it is to access services due to **lack of IT skills** as well as the **high thresholds, rigidity of eligibility and complicated pathways into services** posing a significant barrier. The service users felt that they have to repeatedly expose the worst and most painful parts of themselves in order to be considered for support, which in itself can make them more vulnerable.

“Just down to the simplest thing like filling in forms, that you won’t just have to do that once, you have to keep on doing it, so you have to really dig, cos, I try my best to be the bit that presents well, that isn’t making people uncomfortable. But you have to dig deep to find that bit to go oh, right that’s the bit that’s going to say, I’m going to get that access to that service.”

“One barrier is lack of awareness, lack of knowledge. Some people don’t know how to get, to go on the internet and navigate the web to find services necessarily. You have to be quite savvy to do that.”

Additionally, comments were made that the services themselves can discourage people from engaging, even where there is a valid need for support.

“Also, some people when they knock on the service door the first answer they get is no, which is naturally. They take the first no and never go back again. You have to be persistent.”

The theme of humanity (or lack thereof) in persons delivering services was revisited, and a perceived lack of care from professionals. It was apparent that the group took this quite personally and felt that improvements in this were important but also difficult to achieve. There was some concession made that **the burden of need on services** was driving this due to **professionals being under pressure** to deliver quick services, and the resultant sacrifice of quality of service.

"I think it is within the mental health, the nurses and psychiatrists, I think they are overwhelmed with the amount of people that are having problems and don't know, but it's like you are on a conveyer belt – next please. No compassion."

The **waiting times and time limited aspect of mental health services** was criticised as those waiting for services can sometimes deteriorate, and those within services are sometimes not fully recovered when treatment ends.

It would be fair to say that one of the gaps and barriers that the focus groups' participants felt most passionately about was **the suitability of temporary supported accommodation**. While it was viewed as relatively straightforward to find someone somewhere to stay, specific criticism was pointed at the non-commissioned exempt supported housing sector viewed as inappropriate and unsafe, as not regulated or monitored in terms of standards. It was stressed that people often feel safer in the streets rather than in that accommodation.

"Rather than put them somewhere where they're going to focus on change, you [the council] put them in somewhere where it's full of like mental health, abuse and addiction."

Often supported accommodation can be more detrimental and was seen as wasted money when alternative types of support would be better.

"I've got somebody a place. He wants to get off the streets and stuff like that, he wants to get off the gear. And he's gone there and then getting worse. Because the people there, you know, are worse than he is."

"The city council are spending millions and it's all wasted. They could be putting it into another service that actually helps."

The evaluation of the service user experience conducted by the Changing Futures Together programme confirms that majority of those who reported trying access

support (housing and rehabilitation) complained that **short term /temporary accommodation put them at risk** and or led to relapse. Many did not re-engage with specific services if they had a poor experience.

All of the above can lead to another frequently fed back barrier to engagement with services and support: **mistrust of services**.

"A lot of people, they don't trust services. I didn't trust services, I wanted to do everything on my own. So yeah. But I think on the plus side if you do keep an open mind the support is there."

8b. Service perspective

Our research suggests that professionals view lack of services and specifically those services concerned with **financial support**, creating or exacerbating other pre-existing conditions and pushing people to crisis point.

"And when universal credit came in, that's what it did to them. It threw money at them and left them out there. And now they are in crisis, they are coming back for help but there are not that many places we can send them for help cos everywhere is shutting down, closing down."

Other issues seemed to be centred on there being a **lack of coordinated or integrated services** or the **inappropriateness of services relative to the needs** of clients. There were barriers identified in reference to being unable to refer on behalf of clients and a **lack of a feedback mechanism or information sharing** around services that are suggested to clients.

"Everyone is so scared of GDPR."

"What you are saying is you get people at crisis point, whether they are suicidal, and you get people who have some mental health and anxiety issues who could do with some support and they are either one or two. But where is the middle?"

“And we can’t hand off to anyone. So, you know, we can’t ring up a GP surgery and go look Mr X has got this issue, I think he needs to be seen by somebody. We don’t have that authority to do that. We, and when I say we, I mean collectively as all the agencies we work together, I think there needs to be something along those lines, something that we can feed into.”

There were concerns that **lack of education and skills** within the client group meant they were unable to access some of the support services available or seek employment in a meaningful way. It was felt that clients would potentially not be receptive to training if it were made available, mostly due to peer groups and employer **attitudes towards criminal history**.

“They don’t want to go back to school to learn their reading and writing to get an office job, them and their friends and the areas they are from, people go and work in construction, or you come out of prison and go and work in construction. There is no point applying to work in a shop or office, cos you have got a criminal record.”

Two particular client groups were perceived as being failed by the current systems more than others; **ex-offenders** and more specifically **those subject to multi-agency public protection arrangements** (MAPPAs) to ensure the successful management of violent and sexual offenders. It was highlighted that these persons are often vulnerable and likely to have been a victim of similar offences themselves but are only treated as perpetrators often experiencing a limited access to appropriate support and services.

“So this is customers, yeah the MAPPAs, where they have had, you know they have restrictions placed on them for whatever – it tends to be sex offenders and things like that but you know, they automatically get, you know, if that is one of those customers they get exited from our programme- they can’t be sent to things, they can’t do, because of those restrictions.... They are just as vulnerable as everybody else, as it has been proven 9 times out of 10 that if they have done it, it’s happened to them at some point and things like that.”

Particular problems were highlighted with the **need for self-advocacy** (which some clients struggle with), **continuity of contact with named persons** within services, and **communication between services**.

“People establishing a good rapport with a probation officer but then because of circumstances leaving prison and being put in touch with probation in another area, which staggers the appointments – you lose the contact, you lose the continuity.”

Practitioners we spoke to also mentioned the risk that **No Recourse to Public Funds** (NRPF) poses when it comes to developing MCN and how it may hinder their recovery and transformation. Although the study that underpins this report did not come into a direct contact with individuals with NRPF, we are aware through reports from a range of services that there are perceived significant **gaps in understanding the eligibility** for support and stressed the importance of free and competent legal advice to enable access to appropriate level of support.

9. A Case For Change

People with multiple complex needs (MCN) often suffer from physical and mental health problems, unemployment, family breakdown and exclusion. These are the common symptoms of MCN, but the pathways that lead to developing those needs are unique to each person. It is important to recognise the number and range of services and innovative approaches serving the most vulnerable citizens in Birmingham. In fact, the scale of the statutory and non-statutory provision landscape is significant. However, current services are organised to respond to the common symptoms well, but they are not flexible enough to adapt and support the complex needs and unique journeys of vulnerable people, leading to unfulfilled lives and high service and social costs. Finding a balance between equity and equality is not easy.

We know that problems of MCN start young and require early intervention. By the time we start identifying, assessing and planning interventions we are often years too late increasing significantly the cost to society and economy.

As the cost of late intervention increases, there is less chance for a positive outcome. Extrapolated across Birmingham and Solihull, a total of over £127 million is spent per annum on services for people with at least two needs out of homelessness, offending and substance misuse. There is a high overlap between people in this cohort and those who are unemployed; only about 6% of those with three complex needs are currently employed (60% are unemployed).

As can be seen from the stories of Bee and Dion as well as our focus groups' participants, the diversity of organisations required to support people with MCN may work in separate divisions, but people do not. Dealing with mental health issues, substance misuse, homelessness and offending involves contact through numerous different departments and teams. These can collectively contribute and represent the daily trials and tribulations of one person with several needs. When services are not working together effectively to provide a wraparound care, people just slip through the cracks and organisations are then perceived to be out of touch with the real complexity of people's lives.

The data, research and feedback from those affected by MCN tell us that much more can and should be done to improve the life chances of children and young people in Birmingham and help those already experiencing crisis to transform their lives. This is with a full acknowledgement that Birmingham has already built solid foundations and public services are working in times of financial constraint. When working well and in true collaboration, they are able to serve as a pillar and a guide, removing barriers and bridging many gaps.

10. Working Together

This report has highlighted many examples of good practice and collaboration when it comes to tackling some of the most complex needs and inequalities in Birmingham. But there are still significant gaps and as a City Partnership, working alongside the national policy and locally with the health and wellbeing board, safeguarding children and adults partnerships and the Housing Birmingham board, we have the potential to do more.

I. Through genuine commitment to work together we can develop:

1. A clear offer of support that is evidence based, coherent, cost-effective and sustainable; this includes an offer of safe and suitable supported accommodation;
2. A system that is prevention and early intervention driven through understanding where the critical intervention points are and acting upon them quickly;
3. Recovery and transformation mainstream support that is timely and flexible enough to meet the unique support needs of individuals with complex lives, where they can build on their strengths in an environment of trust and do not experience any unintended consequences of the rigidity of the system;
4. A coordinated approach to the management and delivery of multiagency support and robust information recording and sharing to ensure a seamless provision without duplication and delay.

II. We must ensure that:

1. Support is person centred, trauma informed, culturally sensitive and accessible to all when it is needed most;
2. Support is holistic and MCN are not approached in isolation from key risk factors such as adverse childhood experiences and poverty;
3. Activity of all front-line professionals working with people with MCN is underpinned by the principles of Making Every Contact Count (MECC) and Making Every Adult Matter (MEAM);
4. We share best practice and learn from individuals with lived experience of MCN and design services together.

III. To enable change, system leaders are asked to:

1. Endorse the principles of the MEAM approach across the health and care system in Birmingham;
2. Consider MCN in partner work programmes to develop a shared understanding and ownership of the problems with the current system and a

- clear vision and action for change;
3. Provide strategic support to develop integrated data sharing and intelligence around those who have MCN that cuts across organisational boundaries;
 4. Support a sustainable system and culture change that will enable a greater flexibility and better coordination of services for those with multiple complex needs and create more opportunities for prevention and early intervention;
 5. Influence partner organisations to ensure their commitment, shared responsibility and accountability.

By working together with energy and purpose, we can influence change across the system for people like **Bee** and **Dion**, to support and empower them and many others in our city to build fulfilling futures.

GLOSSARY

Adverse Childhood Experiences (ACEs) are stressful events occurring in childhood including domestic violence, parental abandonment through separation or divorce, being the victim of abuse or neglect, a member of the household being in prison.

Children's trust: Children's trusts are there to support and coordinate the delivery of children's services in a locality and to act as a focal point for decision-making about local children, based on local considerations.

Clinical Commissioning Group (CCG): They are clinically-led statutory NHS bodies responsible for the planning and commissioning of health care services for their local area.

Commissioned services: It means care, support or supervision that has been arranged and paid for on a client's behalf by a public authority such as: In the case of personal care, a local authority adult social care department.

Core cities: The Core Cities Group is a self-selected advocacy group of large regional cities in the United Kingdom and outside Greater London. It is a partnership of eight city councils: Birmingham, Bristol, Leeds, Liverpool, Manchester, Newcastle, Nottingham, and Sheffield.

Cross-tabulation is a method to quantitatively analyse the relationship between multiple variables.

Dual diagnosis: If you have severe mental health problems and problematic substance misuse, you may be given what is known as a 'dual diagnosis' – when both problems are diagnosed.

Early intervention: It means identifying and providing effective early support to children and young people who are at risk of poor outcomes. Effective early intervention works to prevent problems occurring, or to tackle them head-on when they do, before problems get worse.

Eligibility means having the right to receive something (e.g. service, support) through satisfaction of the appropriate criteria that determines whether a person qualifies to receive it.

Ethnography: It is an in-depth qualitative research method based on the recording and analysis of a culture, society, or a population group, usually involving participant-observation and resulting in a written account.

Focus group: It is a qualitative research method which involves gathering of deliberately selected people who participate in a facilitated discussion intended to elicit perceptions about a particular subject matter or issue.

General Data Protection Regulation: GDPR is EU law on data protection and privacy.

Health Inequalities: These are differences in health status or in the distribution of health determinants between different population groups, for example, differences in mortality rates between people from different social classes.

Homelessness is defined as living in housing that is below the minimum standard or lacks secure tenure. People can be categorized as homeless if they are: living on the streets (rough sleeping), moving between temporary shelters, including houses of friends, family and emergency accommodation, living in private boarding houses without a private bathroom or security of tenure.

Homeless Priority Reason: It is one of priority need categories in homeless applications. The definition of priority need is contained in Part 7 of the Housing Act 1996. The categories include pregnant women, households with dependent children and vulnerable people, as defined within the Act.

iCAT (Intelligent Common Assessment Tool): iCAT is all-in-one database, referral and case management tool for supporting clients with MCN, providing a platform for easy communication and information sharing across many specialist services.

Joint Strategic Needs Assessment: A Joint Strategic Needs Assessment (JSNA) looks at the current and future health and care needs of local populations to inform and guide the planning and commissioning (buying) of health, well-being and social care services within a local authority area.

Making Every Adult Matter: MEAM is a coalition of national charities representing over 1,300 frontline organisations across England. Working together they support local areas across the country to develop effective, coordinated services that directly improve the lives of people facing multiple disadvantage.

Making Every Contact Count: MECC is an approach to behaviour change that uses day to day interactions that organisations and people have with other people to support them in making positive changes to their physical and mental health and wellbeing.

Multi-Agency Public Protection Arrangements (MAPPA): The Criminal Justice Act 2003 provides for the establishment of MAPPA in each of the 42 criminal justice areas in England and Wales. These are designed to protect the public, including previous victims of crime, from serious harm by sexual and violent offenders. They require the local criminal justice agencies and other bodies dealing with offenders to work together in partnership to ensure that the appropriate resources are available to manage risks posed by sexual, violent and other dangerous offenders in the community and that the public are protected as far as possible.

Maslow's hierarchy of needs: It is a motivational theory in psychology introduced in 1943 by an American psychologist Abraham Maslow. The theory comprises a five-tier model of human needs, often depicted as hierarchical levels within a pyramid. Needs lower down in the hierarchy must be satisfied before individuals can attend to needs higher up. From the bottom of the hierarchy upwards, the needs are: physiological, safety, love and belonging, esteem, and self-actualisation.

Multi-Agency Public Protection Arrangements: In the jurisdiction of England and Wales, a Multi-Agency Public Protection Arrangement (MAPPA) is an arrangement for the «responsible authorities» tasked with the management of registered sex offenders, violent and other types of sexual offenders, and offenders who pose a serious risk of harm to the public.

Multiple Complex Needs: MCN are persistent, problematic and interrelated health and social care needs which impact an individual's life and their ability to function in society. They are likely to include homelessness, mental, psychological and physical health problems, drug and/or alcohol dependency, and offending behaviour.

New Directions Team (NDT) Assessment also known as the Chaos Index is a way of measuring multiple exclusion and complex needs in order to establish eligibility for services and support. The assessment was developed by the New Directions Team in the London Borough of Merton as part of the Adults Facing Chronic Exclusion national programme.

No Recourse to Public Funds: NRPF is a condition imposed on someone due to their immigration status. Section 115 Immigration and Asylum Act 1999 states that a person will have no recourse to public funds if they are subject to immigration control. This prohibition only applies to certain specified public funds, so a person with this condition is not prevented from accessing other publicly funded services, including support from social care.

Outcomes Star: It describes a family of evidence-based tools for measuring and supporting change when working with people.

Peer mentor is a person who has lived through a specific experience and is able to guide and support another person, who is new to that experience.

Psychologically Informed Environment (PIE) is one that considers the psychological makeup – the thinking, emotions, personalities and past experience - of its participants in the way that it operates. It's an approach to supporting people out of homelessness, in particular those who have experienced complex trauma or are diagnosed with a personality disorder. It also considers the psychological needs of staff: developing skills and knowledge, increasing motivation, job satisfaction and resilience.

Prevalence: It is the number of disease cases present in a particular population at a given time.

Prevention: It is an action of stopping something (in the context of this report – health inequalities, multiple complex needs or crisis) from happening.

Qualitative research: It is primarily exploratory research. It is used to gain an understanding of underlying reasons, opinions, and motivations. It provides insights into the problem or helps to develop ideas or hypotheses for potential quantitative research.

Quantitative measures are measures that rely on numbers. The goal of quantitative measurement is to run statistical analysis, so data has to be in numerical form.

Quantitative research is used to quantify the problem by way of generating numerical data or data that can be transformed into usable statistics. It is used to quantify attitudes, opinions, behaviours, and other defined variables – and generalise results from a larger sample population.

Randomised Controlled Trial: RCT is a quantitative study in which people are allocated at random to receive one of several clinical interventions to measure and compare their outcomes. RCTs are quantitative, comparative, controlled experiments in which investigators study two or more interventions.

Relationship-based practice model: The central characteristic of relationship-based practice is the emphasis it places on the professional relationship as the medium through which the practitioner/ social worker can engage with and intervene in the complexity of an individual's internal and external worlds in order to support them to achieve positive outcomes and improve their lives.

Social determinants of health: These are conditions in which people are born, grow, live, work and age, and which are shaped by the distribution of money, power and resources at global, national and local levels.

Statistical neighbours: These are local authorities with similar demographic characteristics, e.g. age distribution, levels of deprivation.

Statutorily homeless: These are households or individuals whom the local authority has a legal duty to assist on the basis that they are unintentionally homeless and fall within a specified priority need group.

Supported housing: It describes is any housing scheme where housing, support and sometimes care services are provided as an integrated package. Supported housing services include homelessness hostels, refuges, sheltered housing and long-term accommodation for people with ongoing support needs.

Sustainability and Transformation Partnership (STP) is a collaboration of public NHS, council social care commissioners and providers across a local area (of between 300,000 and 3,000,000 population) working together with partners in the voluntary, community and independent sectors to find the most effective ways to manage the health and care needs of the population within available resources and provide high quality, sustainable care for the future. There are 44 STPs across England.

Universal Credit is a benefit payment for people in or out of work. It replaces some of the previous benefits and tax credits:

- Housing Benefit
- Child Tax Credit
- Income Support
- Working Tax Credit
- Income-based Jobseeker's Allowance
- Income-related Employment and Support Allowance.

Warwickshire-Edinburgh Wellbeing Scale: These were developed to enable the measuring of mental wellbeing in the general population and the evaluation of projects, programmes and policies which aim to improve mental wellbeing. The 14-item scale WEMWBS has 5 response categories, summed to provide a single score. The items are all worded positively and cover both feeling and functioning aspects of mental wellbeing, thereby making the concept more accessible. The scale has been widely used nationally and internationally for monitoring, evaluating projects and programmes and investigating the determinants of mental wellbeing.

APPENDIX I

Update on actions recommended in the Director of Public Health Annual Report 2018: Fulfilling Lives for Under Fives.

Domain	Recommendations	Progress to date	What next
1. Overarching – fulfilling lives for under fives	1. Commissioners and providers of Early Years services within Birmingham take account of the demographic makeup and distribution of the under-fives population across the city (specifically in Central and Eastern areas) and target efforts and resources accordingly.	Birmingham Forward Steps (BFS) is contracted to provide a city-wide service, which meets the needs of different parts of the city, e.g. children's centres remain operational in areas, where the need is greater.	We will continue to support the provider to implement the targeted approach. Ensure that the findings in the JSNA help inform this approach.
	2. Commissioners and providers have in place robust data collection systems to monitor health needs and outcomes for children under five and their families, including the Ages and Stages Questionnaire (ASQ) and breastfeeding rates.	Performance indicators for BFS contract include ASQ and breastfeeding rates, they are monitored monthly. Commissioners of services and their providers have worked closely to improve data collection systems to ensure they meet data quality requirements.	We will continue to support the provider to deliver robust data collection and reporting systems.
	3. Local Sustainable Transformation Partnerships (STP) across the city encourage commissioners and service providers to strengthen the prevention offer from preconception through to early years for the citizens of Birmingham, particularly through the Local Maternity System (LMS) and Birmingham Forward Steps.	Birmingham and Solihull STP has a specific children and maternity portfolio. A subgroup of this is CHIP (children's health improvement programme), this is where work is being done to improve the prevention offer with a particular focus on the LMS and BFS.	We will develop and implement specific action plans for prevention under the STP. This currently includes increasing uptake of children's vaccinations.
	4. Inclusive growth and economic development programmes across the city and those led by the West Midlands Combined Authority, maximise opportunities to promote the wellbeing of young children and their families, particularly those in poverty and in the greatest need.	The city has been successful in being part of the Local Government Association's Childhood Obesity Trailblazer programme which is focused on upstream interventions to improve the food environment for families.	We will continue to implement the Childhood Obesity Trailblazer programme in the city.
	5. The Birmingham Health and Wellbeing Board encourages and facilitates strong strategic partnership working and ensures robust governance arrangements are in place between statutory and non-statutory bodies to monitor and promote the health and wellbeing of under five-year olds.	Four new sub-groups have been created which report to the health and wellbeing: Creating a Physically Active City Forum Creating a Mentally Healthy City Forum Creating a City without Inequality Forum Creating a Healthy Food City Forum The needs of 0-5-year olds and their families are included in all these delivery forums.	The Children and Young People chapter of the JSNA has been developed and will inform the agenda further.

2. Conception, pregnancy, neonatal	1. The Birmingham and Solihull United Maternity Programme (BUMP), as it develops into the Local Maternity System, must be explicit about the arrangements for supporting women with additional needs described in this section.	Current work on supporting women with additional needs is being undertaken. Service capacity and demand are being reviewed in Birmingham and Solihull to ensure needs can be met.	Qualitative work on pre-conception will be carried out to inform future service provision.
	2. The Birmingham and Solihull United Maternity Programme, as it develops into the Local Maternity System, must be explicit about the arrangements for identifying women who smoke, motivating them to stop, and the referral arrangements with the Birmingham and Solihull Smoking Cessation providers.	The ante-natal smoking cessation model is delivered by 2 trained midwifery support workers in Erdington community midwifery team, offering specialist clinics embedded into maternity services. The pilot has proved to be successful leading to higher patient engagement and chances of quitting smoking.	The BUMP programme board has extended the model to prevent a gap in provision, until a similar model can be rolled out to Birmingham maternity services.
	3. The Birmingham and Solihull United Maternity Programme, as it develops into the Local Maternity System, must ensure robust delivery of the NHS Saving Babies' Lives Care Bundle.	The BUMP programme is focusing on the delivery of the NHS Saving Babies Lives Care Bundle and progress is overseen through the programme board. Over the last year there has been a significant progress, including a new pathway for the management of pre-term labour, a joint peer to peer perinatal mortality review process and a successful pilot of the Single Point of Access model across 16 GP surgeries. Funding has been secured from Health Education England to support a roll out of a Saving Babies Lives training programme, starting in 2020.	The BUMP programme will continue to progress delivery of NHS Saving Babies Lives Care Bundle to complete implementation in line with the national guidelines.
	4. Birmingham Forward Steps must establish a systematic approach to supporting women's nutrition and physical activity in the postnatal period, particularly those who are overweight or obese.	BFS are commissioned to deliver the healthy child programme, which includes providing lifestyles advice to women in the postnatal period.	We will continue to monitor the outcomes from the healthy child programme and ensure ongoing improvement, as required.
3a. Early years health and care: health service use	1. The work on increasing the uptake and use of the Healthy Start vouchers should continue and report to the Health and Wellbeing Board and Overview and Scrutiny Committee on progress and impact in June 2019.	<p>The baseline uptake of Healthy Start vouchers in March 2018 was 70%. Through a programme of targeted action working with agencies we increased the uptake to 75% and maintained the uptake at 75% through to February 2019.</p> <p>In February 2019 the DWP and NHS adjusted their databases of eligible beneficiaries and uncovered a significant number of people who were eligible for HSV that were previously unknown. This resulted in all local authority rates dropping, in Birmingham it dropped to 60% in March 2019, an additional 2,824 extra beneficiaries were identified. Work to increase uptake is under way and it is overseen by the Financial Inclusion Partnership as well as the Creating a City without Inequality Forum.</p>	<p>We are now working to sign up the additional families and have increased our rate to 62%. As well as front line health visiting and children centre staff we are working with:</p> <p>DWP, early years education community groups, debt advice agencies, GPs and primary care</p> <p>to sign up the additional eligible beneficiaries.</p>

	<p>2. The Birmingham and Solihull United Maternity Programme, as it develops into the Local Maternity System, should collaborate with the City Forward Steps to establish a robust and sustainable offer of breast-feeding support to improve breast-feeding rates at initiation, 6-8 weeks and beyond.</p>	<p>The infant feeding sub-group of the BUMP includes representation from maternity service providers and Birmingham Forward Steps. The aim of this group is to develop a robust, consistent, systematic offer across the early years system to increase breast-feeding initiation and duration rates.</p>	<p>We will continue to develop the offer and monitor outcomes.</p>
	<p>3. Birmingham City Council should work with the commissioned Early Years Service – Birmingham Forward Steps (BFS) to address data quality issues, particularly in relation to breast-feeding rates.</p>	<p>BCC has worked with BFS and Public Health England colleagues to improve breast-feeding data quality. BFS data collection systems are being modified to ensure that data generated in future meets quality criteria.</p>	<p>We will continue to monitor and evaluate the data.</p>
	<p>4. Birmingham City Council (BCC) and partner organisations should develop an offer of enhanced nutritional and physical activity opportunities to optimise weight and fitness for life, based on a whole systems approach to obesity.</p>	<p>BCC is working with partners through the health and wellbeing board's forums (physically active city and healthy food city) on a whole systems approach to obesity which involves re-focusing work upstream.</p>	<p>We will develop action plans through the Creating a Physically Active City Forum and the Creating a Healthy Food City Forum.</p>
<p>3b. Early years health and care: vaccinations</p>	<p>1. NHS England works with partners to develop action plans in areas, communities or populations with low uptake to deliver increased uptake. This will reduce levels of inequality in uptake.</p> <p>2. NHS England and Clinical Commissioning Groups to produce and implement plans to target the lowest performing 10% of GPs and deliver increased uptake in Practices with the very lowest performance.</p>	<p>Birmingham and Solihull STP has identified improving childhood vaccination uptake as a priority, and action plans are being developed with stakeholders, including NHS England (NHSE), to take this forward. West Midlands Immunisation Partnership meetings are in place for planning between NHSE, Local Authorities and CCGs.</p> <p>NHSE and CCG leads have worked together on flu vaccine ordering and performance.</p>	<p>We will continue to work in partnership to improve vaccination uptake.</p> <p>MMR tail-gunning has been planned for Birmingham and Coventry from April 2020.</p>
<p>3c. Early years health and care: Oral health</p>	<p>1. Public Health England to publish the results of Children's Oral Health Needs Assessment to identify areas or communities with the worst oral health inequalities.</p> <p>2. Birmingham Forward Steps to adopt NICE and Public Health England oral health improvement recommendations.</p>	<p>BFS have worked with PHE colleagues to adopt best practice in relation to oral health improvement recommendations.</p>	<p>We are currently awaiting publication of 2019 survey of 5-year olds by PHE and will plan action in response to its findings.</p>

4. Early years education and development	<p>1. Birmingham Forward Steps should develop locality links with the local private, voluntary, or independent providers of Early Years Education to enhance and enable the uptake of the Early Years 2-2.5-year assessment and educational entitlement offers.</p>	<p>Education and Development BFS representatives engage in regular early years forum meetings which provides an opportunity to develop links with early years education providers in the private, independent and voluntary sectors.</p> <p>Children's centre staff are working to develop good links with early education providers.</p>	<p>We will continue to develop collaborations and monitor impact of joint action.</p>
	<p>2. Birmingham Forward Steps and Birmingham City Council should work together to address data quality issues identified in relation to the Ages and Stages questionnaire (ASQ-3) collected at the 2-2.5-year health visitor assessment.</p>	<p>BFS, BCC and PHE colleagues have worked closely together to address data issues in relation to the ASQ-3 collected at the 2-2.5-year health visitor assessment. BFS systems have now been adapted to incorporate necessary changes and anticipate seeing considerable improvements in data quality within the current financial year.</p>	<p>We will continue to monitor and evaluate the data.</p>
5a. Family and social environment	<p>1. The reduction in the impact of family poverty on children should become the outcome measure for the economic developments in the City by all partners collectively. The principles of the Inclusive Growth Commission and WMCA Inclusive Growth Unit should be explicitly explored for their implications in Birmingham by Birmingham Financial Inclusion Partnership and Birmingham Child Poverty Action Forum.</p>	<p>Birmingham's Child Poverty Action Forum (CPAF) has inclusive growth as a key policy area of focus. The CPAF alongside the Financial Inclusion Partnership is supporting cross-sector plans to make Birmingham a living wage city.</p> <p>A cross-sector group, led by the Council, has been established. This group is working up plans to submit to the Living Wage Foundation.</p>	<p>We will continue to work in partnership to tackle child and family poverty in the city and continue to promote a living wage approach.</p>
	<p>2. The poor health of deprived areas is a symptom of, and barrier to, inclusive growth. The Joint Strategic Needs Assessment (JSNA) must describe these patterns of impacts and should be used to support decisions to reduce family poverty by Birmingham Health and Wellbeing Board and Birmingham Financial Inclusion Partnership.</p>	<p>The CYP chapter of the JSNA includes patterns of deprivation and its impact on outcomes.</p> <p>This will be used to inform the work of the fora set up under the health and wellbeing board, including the Creating a City Without Inequality Forum as well as the Financial Inclusion Partnership, which the Forum is linked with.</p>	<p>We will develop a joint upstream action as part of the Creating a City without Inequality Forum's and the Financial Inclusion Partnership's work.</p>
	<p>3. Evaluation of schemes using 106 funding in Longbridge should be shared widely with recommendations and next steps to start further innovative schemes along these principles by Birmingham Health and Wellbeing Board and Child Poverty Action Forum.</p>	<p>The Longbridge scheme has not been evaluated.</p> <p>As part of the Longbridge project, an RCT was conducted on Run a Mile. Findings were published. https://research.birmingham.ac.uk/portal/files/46440038/Breheny_et_al_Cluster_Randomised_BMC_Public_Health.pdf</p>	

5b. Adverse Childhood Experiences	<p>1. Opportunities for tertiary prevention should be developed with adult mental health clients (including personality disorder, complex family presentations), children's social care (Child Protection and Child in Need) and Primary Care.</p> <p>2. Opportunities for secondary prevention should be developed into an early emotional help system framework for primary schools. This should be a partnership of schools, the voluntary sector and NHS, which responds to children with difficult and concerning behaviour. This should include the introduction of enquiry into the adverse experiences in the child and family.</p> <p>3. Opportunities for primary prevention should be sought in sharing the understanding of impacts of adverse experiences with parents during the antenatal period by the Local Maternity System and Forward Thinking Birmingham.</p>	<p>Opportunities to develop an ACEs informed approach across the system, at a strategic level, are being explored by senior Public Health staff in collaboration with the Children's Trust, who have been implementing relevant training. This will provide an opportunity to build on the existing Framework of Preventing the Impact of ACEs in Childhood in Birmingham at primary, secondary and tertiary levels.</p> <p>Commissioners and providers with an interest in emotional health and wellbeing regularly meet as part of the Education Emotional Wellbeing Steering Group and help to shape emotional health and wellbeing services around schools through links with the CYP Local Mental Health Transformation Board. Enquiry into adverse childhood experiences is an implicit aspect of this work.</p> <p>Primary prevention opportunities arise across the LMS and early years settings providers.</p>	<p>We will continue to develop a joint action with partners, taking a public health approach to addressing ACEs and their impact.</p>
	<p>4. Opportunities to develop locality understanding and responses in wider linked communities such as extended families, faith or social groups and neighbourhoods to the evidence of harmful impact of these experiences should build upon the experiences of the pilots in Castle Vale and Kings Norton (Dr Andrew Coward, Area Early Help Hubs and Forward Thinking Birmingham).</p>	<p>At the time of producing the report the West Midlands Combined Authority Adverse Childhood Experiences lead, Dr Andrew Coward, was proposing a community-based development of awareness of the impact of these experiences in Castle Vale and Kings Norton. This would, of course, be evaluated before more widespread adoption.</p>	<p>We will continue to work with partners to build greater understanding of ACEs at a locality level in order to address these issues more effectively.</p>
5c. Child homelessness	<p>1. The Joint Strategic Needs Assessment should focus on supporting the evaluation of the Birmingham Homelessness Prevention Strategy by Adult Social Care, Birmingham Public Health, and Birmingham Forward Steps.</p>	<p>The 2019-20 JSNA chapter on children and young people includes a specific section on homelessness and how it affects children and young people to help inform the local approach.</p>	<p>We will continue to collaborate with the Housing and CCG partners to improve support to children and young people living in temporary accommodation.</p>
