

develop economic strategies for their regions. Their funding streams included the SRB from 1999 onwards. More recently their remit has been reinforced as the strategic leader of economic development and regeneration in regions such as the West Midlands.

The Learning and Skills Council is a nationally run organisation with 47 local Learning and Skills Councils across England. The Council was formed in April 2001 replacing the Training and Enterprise Councils and the Further Education Funding Council to work with partners, employers, learning providers, community groups and individuals to develop and implement strategies that meet the Government's aims set out in the 'Learning to Succeed' White Paper. The LSC is responsible for all post-16 education and training.

Jobcentre Plus replaced the Employment Service and Benefits Agency in April 2002 and was a major part of the government's Welfare to Work Strategy. It sought to establish a work focus in relation to all new or repeat claims for benefit: to do so required the integration of benefit claiming, (the core business of the Benefits Agency) and work placement/job seeking (a central role of the Employment Service). The new service (which will not be fully operational till 2006) means that customers have one point of contact for benefits advice and help to get back into work.

Connexions is the government's new support service for all young people aged 13 - 19 in England. The service aims to provide integrated advice, guidance and access to personal development opportunities for this group and to help them make a smooth transition to adulthood and working life. Connexions joins up the work of six government Departments and their agencies and organisations on the ground, together with private and voluntary sector groups and youth and careers services. It offers practical help with choosing the right courses and careers, including access to broader personal development through activities like sport, performing arts and volunteering activities. It will also provide help and advice on issues like drug abuse, sexual health and homelessness.

6.6.3 Conclusions

Since the introduction of the SRB there have been significant changes in the policy environment in which the programme has operated. This has led to a considerable amount of organisational change in government departments and the agencies responsible to them.

However many of the issues, which the scheme and the new policy directives were set up to address remain of serious concern. Partly this is about the intractable, deep-rooted and complex nature of unemployment and market failure in some inner city urban areas and

the complexity of actions to resolve this. In part it may be that there is a lack of added value from the range of schemes and initiatives working together.

We received a number of comments broadly suggesting that the government should reduce the number of initiatives, provide local areas and cities with adequate funds and trust them to get on with it. This would reduce the enormous costs of the bureaucracy and administration currently needed to underpin this raft of initiatives.

7: Conclusions

7.1 Introduction

In this chapter we draw on the evidence and findings presented in the previous chapters to summarise the main issues and features of the Birmingham based SRB programmes relative to the objectives of the review. We will identify what is working well and what improvements could be made to regeneration programmes across the city. The information will be presented in the following sections:

- □ The employment impact of the SRB programmes in Birmingham
- □ The partnership process and involvement of stakeholders
- Sustainability of Regeneration Actions

7.2 The Employment Impact of SRB Programmes in Birmingham.

The SRBCF, in drawing together eighteen previously separate budgets, was designed to encourage a more coherent, holistic and strategic approach to the design of regeneration interventions. Birmingham was successful in winning resources in five of the six rounds of the SRBCF. Across the city there are eleven separate programmes which are either thematic in approach, or they are area-based, focussing on a large range of issues in a defined geographical area. Each of these programmes included some or all of core SRB objectives identified in Chapter 5 Section 1 of the report.

In reviewing the delivery plans and performance reports for each programme it is immediately clear that the visions are ambitious, the programmes complex and varied in their objectives and the methods they used to achieve these. This is particularly so in the way each partnership tackles the issues related to employment making comparisons between schemes difficult.

However we are able to say that the SRB programmes in Birmingham have created over 8,000 jobs and safeguarded a further 28,700. Enterprise Link, part of SRB1, was the only programme which was solely concerned with jobs related outputs. This scheme overachieved its targets. Although the remaining programmes with the exception of the CEBP all had jobs related outcome targets the scale and scope of these varied from 20 to 6543 jobs created.

In undertaking this review we requested information from a wide

range of people and agencies involved in or benefiting from the SRBCF in the city. Unfortunately the information provided has not been consistent across all programmes and we have had limited success in identifying the types of jobs created and the beneficiaries of those jobs.

This was partly due to the emphasis which GOWM put on the assessment of outputs against the delivery plan targets. This has led to SRB being very much output (as opposed to outcome) focussed. Thus, any assessment of achievements tends to be preoccupied with whether the individual projects are achieving their targets, assessed against short-term quantitative indicators, (for example the number of jobs created or saved, the number of trainees trained), rather than whether the strategic objectives have been met.

It is this output dominated audit culture which has characterised the SRB in all rounds rather than a concern with what differences the SRB programmes have made to the quality of life for those living in the most disadvantaged areas.

The second problem we encountered in obtaining evidence for the review relates to the way this output data is assembled at different layers of management throughout the process. For example there is specific evidence required to claim a job created output but this appears to be held at the point of project delivery. This qualitative information is not collated at programme or Accountable Body level in the majority of cases. There is no suggestion that the claims are inaccurate (it was outside the scope of this review to examine that issue) and there are comprehensive audit processes in place, which have been made more robust over recent years. The concern is that the information is difficult to find and in many cases not available.

We conclude from this assessment that in future, SRB programmes should have employment evaluation procedures built into every stage of the planning and delivery process - so that the 'additionality' of the programme can be clearly demonstrated at key milestones during the project and as part of a final evaluation & exit strategy. Client tracking, surveys of beneficiaries and non-beneficiaries and better administrative data are all examples of good practice leading to improvements in evaluation.

7.3 The Scale and Breadth of the Programmes

Individual contributors and the visits also highlighted remarkable differences around the physical scale, population and the complexity of the activities to be delivered in comparison to other areas. The amount of funding and lifetime of the programe was also felt to be significant.

Chapter 6 highlights that the population density and geographical area covered in each of the Birmingham SRB schemes is between two and three times higher than in Castle Vale or Liverpool. Funding levels vary too. Castle Vale is a twelve year £300m programme but SRB1 in Saltley and Small Heath was £12.8m and SRB2 was £23m both over 7 years.

Value for money was an aspect of the competitive nature of the SRB and bidders reported that it was difficult to anticipate what GOWM was looking for in a successful bid. This perhaps encouraged projects to be over ambitious in what they could achieve in order to secure the resources. This was felt to be more of an issue in the early rounds when there were few if any alternative funding opportunities. This approach failed to acknowledge the deep seated, intransigent nature of the problems of market failure in urban areas.

Some respondents and the early evaluation reports identified the tendency for projects to operate in silos and to neglect the opportunities to interact. There is a clear need to ensure that there is a better understanding of the consequence of one type of action on another e.g. housing demolition, the types of jobs created and the skills development of the local communites, along with the transport infrastructure.

7.4 The Partnership Process and Involvement of Stakeholders

One of the key aspects of the SRB approach was its emphasis on the partnership model of delivery. This was fundamental to the delivery of each scheme, as it was believed that this would lead to better regeneration outcomes and to the sustainability of the process.

There were many comments about the role of strategic agencies (who in the main were co-signatories of the bids) and their attitude to regeneration monies, particularly in the early rounds. The views were expressed that these key agencies should clearly state what their contribution and commitment to the programme is over its lifetime and beyond, which would ensure the sustainability of the regeneration process. Further it was felt that they should be more proactive in identifying innovative best practice from the regeneration initiatives and apply this to mainstream activities and funding regimes.

It was also reported that setting up the initial partnerships which pulled the bids together was relatively easy but it proved to be much more difficult to develop the partnerships beyond this to a more collaborative form of working with a shared vision and common

objectives. This is in part due to the conflicting objectives of funding bodies and the significant number of new regeneration initiatives over the last five years. The considerable changes in Government Departments and in organisational structures of a range of agencies has also contributed to this aspect of the partnership.

There were a range of models adopted across the different rounds in setting up the partnership boards These varied from a board of Chief Executives of agencies in the Core Skills Partnership to an elected board of Community Representatives in SRB6. In general contributors felt that the board structures were difficult to establish but once set up worked reasonably well.

We received many comments about the partnerships, stakeholder involvement and the role of key agencies concerning the early rounds in particular. A key message coming through was that the City Council should provide clearer leadership and adopt a role, which was more facilitative than dominant.

There were also a number of comments concerning the partnership process and particularly involving the community in identification of needs, decision-making and planning. Although there is evidence of higher community involvement in the later rounds several respondents, highlighted that the partners were slow to take on board the lessons from both mistakes and good practice of the earlier rounds.

Further issues related to the range of partners involved (and equally as important not involved) in the programmes and the need to be clear what was expected of each partner and each board member. Overall a considerable amount of time is spent in developing the partnerships in regeneration. However there is little hard evidence on the impact, effectiveness and added value these partnerships bring to the regeneration process. No partnership indicators were identified during the review although anecdotally some respondents thought the process worked well and others did not.

7.5 Sustainability of Regeneration Actions

Partnerships should be clearer about the issues they are trying to resolve before the programme starts. This could be summed up as funding the programme rather than programming the funds and would provide a better focus for the interventions and projects within the programme. In order to know what has been achieved an audit of the existing and planned mainstream contributions in the area should be completed before the programme commences.

There is limited evidence that mainstream agencies endeavour to

ensure that innovation and best practice from programmes is taken forward in mainstream delivery. Stakeholders also suggested that the lessons of past mistakes or good practice were not being learned and this is due, in part, to the culture of short term contracts for staff on programmes. The knowledge and skill gained throughout the programme is lost to future programmes as staff leave for other jobs before the end of the programme. This is particularly important in terms of establishing boards and evaluation of activities.

Individual partnerships carry out their own interim and final evaluations without pressure from GOWM/AWM but there have not been evaluations of the whole impact of the programmes. Neither GOWM nor AWM have pushed for this, the reasons perhaps being the scale and complexity of the SRB programmes in the West Midlands and Birmingham in particular, makes the demand on staff time and resources that would be required prohibitive.

Whilst GOWM said they might evaluate the impact SRB has had on the West Midlands little work has been done to date. Yet some assessment of the impact on Birmingham and the region would appear to be essential if the next generation of urban policy is to benefit from the lessons to be drawn from the challenge fund approach.

The recommendations presented in the following chapter are drawn from the findings of the review. We hope that they will contribute to future policy on regeneration support both organisations and staff delivering future regeneration activities to improve their understanding of the issues and have a greater impact on the desired outcome.

8: Recommendations

No	Recommendation	Responsibility	Completion Date
1	Future regeneration priorities of the city should have clearer objectives linked to defined outcomes and methods of measurement. They should be set down in the Community Strategy, show the linkage between the regeneration priorities and the Neighbourhood Renewal Strategy and Targets and other relevant strategies and identify the funding to deliver the actions.	The Leader of the Council in consultation with the City Strategic Partnership , the Office of the Deputy Prime Minister (ODPM) and GOWM	Oct 2003
2	Protocols for Partnership should be developed for all major regeneration programmes. This will ensure that the added value of the partnership process is clear at the outset.	Cabinet Member for Regeneration should make representation to AWM and GOWM	Oct 2003
3	Identify the freedoms and flexibilities, which can be achieved through mainstream services to ensure the sustainability of best practice and innovation at the local level.	Cabinet Member for Regeneration to make representations to AWM, GOWM and ODPM	Dec 2003
4	Improve the guidance provided in setting up future regeneration partnerships, boards and delivery vehicles. This could be achieved through seminars and discussions with partners and communities in the city, region and nationally.	Cabinet Member for Regeneration and Director of Economic Development	Dec 2003
5	Ensure that there is coherence of delivery and objectives in relation to these and future regeneration programmes and other initiatives that can be targeted on specified areas.	Cabinet Member for Regeneration and Director of Economic Development	Dec 2003
6	Review the staffing structures of existing regeneration programmes to ensure that they have the capacity to deliver the activities. Ensure that future programmes have a staff resource plan in place at the outset.	Director of Economic Development	Dec 2003
7	Ensure all current and future regeneration schemes put in place and implement effective tracking and evaluation mechanisms to measure the impact of the	Director of Economic Development and AWM in taking forward SRB6, NDC1 and 2 and	Dec 2003

	actions on intended beneficiaries and issues.	future Regeneration programmes	
8	Review succession (including exit) strategies of the current range of programmes to establish how they are managed to the end of the funding and ensure the regeneration process is sustainable.	Director Of Economic Development	Jan 2004
9	Ensure that there are clear and continuous progression opportunities for long term unemployed people to develop the necessary skills to access jobs.	Director of Economic Development through the Employment Strategy Group to ensure the links are made across all projects and programmes.	Dec 2003
10	Progress on actions within these recommendations should be reported to the Regeneration Overview and Scrutiny Committee.	Named persons in 1-8 above	Dec 2003 and annually thereafter.
